

## ProtoNode FPC-N34 and ProtoNode FPC-N35 Start-up Guide

### For Interfacing Camus Products:

Sola, DynaFLO, Valiant

### To Building Automation Systems:

BACnet MS/TP, BACnet/IP, Metasys N2, Modbus TCP/IP LonWorks and  
SMC Cloud

#### APPLICABILITY & EFFECTIVITY

Explains ProtoNode hardware and how to install it.

The instructions are effective for the above as of December 2020.

## **Technical Support**

Thank you for purchasing the ProtoNode for Camus.

Please call Camus for technical support of the ProtoNode product.

MSA Safety does not provide direct support. If Camus needs to escalate the concern, they will contact MSA Safety for assistance.

Support Contact Information:

Camus Hydronic Ltd.  
6226 Netherhart Rd.  
Mississauga, Ontario

Customer Service:  
905-696-7800

Email: [camus@bellnet.ca](mailto:camus@bellnet.ca)

Website: [camus-hydraulics.com](http://camus-hydraulics.com)

## Quick Start Guide

1. Record the information about the unit. (**Section 3.1**)
2. Check that the ProtoNode and customer device COM settings match. (**Section 3.3**)
3. FPC-N34: Select the protocol configuration on the S Bank DIP switches. (**Section 3.4**)
4. BACnet MS/TP (FPC-N34): Set the MAC Address on the A Bank DIP switches. (**Section 3.5.1**)
5. BACnet MS/TP (FPC-N34): Set the baud rate of the BACnet MS/TP field protocol on the B Bank DIP switches. (**Section 3.5.2**)
6. Connect the ProtoNode 6 pin RS-485 connector to the RS-485 network that is connected to each of the devices. (**Section 4.2**)
7. **If using a serial field protocol:**  
**Connect the ProtoNode FPC-N34** 3 pin RS-485 port to the field protocol cabling, (**Section 4.3**)  
**or connect the ProtoNode FPC-N35** 2 pin LonWorks port to the field protocol cabling. (**Section 4.4**)
8. Connect power to the ProtoNode 6 pin port. (**Section 4.5**)
9. Use a web browser to access the ProtoNode Web Configurator page to select the profiles of the devices attached to the ProtoNode and enter any necessary device information. Once the devices are selected, the ProtoNode automatically builds and loads the appropriate configuration. (**Section 5**)
10. Ethernet Network (FPC-N34): If using an Ethernet field protocol, use a web browser to access the ProtoNode Web Configurator page to change the IP Address. (**Section 5.5**)
11. LonWorks (FPC-N35): The ProtoNode must be commissioned on the LonWorks Network. This needs to be done by the LonWorks administrator using a LonWorks commissioning tool. (**Section 6**)

## 1 CERTIFICATIONS

### 1.1 BTL Mark – BACnet<sup>1</sup> Testing Laboratory

The BTL Mark on ProtoNode is a symbol that indicates that a product has passed a series of rigorous tests conducted by an independent laboratory which verifies that the product correctly implements the BACnet features claimed in the listing. The mark is a symbol of a high-quality BACnet product.

Go to [www.BACnetInternational.net](http://www.BACnetInternational.net) for more information about the BACnet Testing Laboratory. Click [here](#) for the BACnet PIC Statement.

### 1.2 LonMark Certification

LonMark International is the recognized authority for certification, education, and promotion of interoperability standards for the benefit of manufacturers, integrators and end users. LonMark International has developed extensive product certification standards and tests to provide the integrator and user with confidence that products from multiple manufacturers utilizing LonMark devices work together. MSA Safety has more LonMark Certified gateways than any other gateway manufacturer, including the ProtoCessor, ProtoCarrier and ProtoNode for OEM applications and the full featured, configurable gateways.

<sup>1</sup> BACnet is a registered trademark of ASHRAE

## 2 INTRODUCTION

### 2.1 ProtoNode Gateway

The ProtoNode is an external, high performance **building automation multi-protocol gateway** that is preconfigured to communicate between Camus' products (hereafter called "device") connected to the ProtoNode and configure them for BACnet MS/TP, BACnet/IP, Metasys<sup>2</sup> N2 by JCI, Modbus TCP/IP or LonWorks<sup>3</sup>.

It is not necessary to download any configuration files to support the required applications. The ProtoNode is pre-loaded with tested profiles/configurations for the supported devices.

**WARNING: Only use screws supplied by MSA Safety in the holes found on the back of the unit when attaching the optional DIN rail bracket. Use of any other screws may damage the unit.**

**FPC-N34 Connectivity Diagram:**

<sup>2</sup> Metasys is a registered trademark of Johnson Controls Inc.

<sup>3</sup> LonWorks is a registered trademark of Echelon Corporation

### FPC-N35 Connectivity Diagram:

The ProtoNode can connect with the SMC Cloud. The SMC Cloud allows technicians, the OEM's support team and MSA Safety's support team to remotely connect to the ProtoNode. The SMC Cloud provides the following capabilities for any registered devices in the field:

- Remotely monitor and control devices.
- Collect device data and view it on the SMC Cloud Dashboard and the SMC Smart Phone App.
- Create user defined device notifications (alarm, trouble and warning) via SMS and/or Email.
- Generate diagnostic captures (as needed for troubleshooting) without going to the site.

For more information about the SMC Cloud, refer to the [SMC Cloud Start-up Guide](#).

### 3 SETUP FOR PROTONODE

#### 3.1 Record Identification Data

Each ProtoNode has a unique part number located on the side or the back of the unit. This number should be recorded, as it may be required for technical support. The numbers are as follows:

Model	Part Number
ProtoNode FPC-N34	FPC-N34-0565
ProtoNode FPC-N35	FPC-N35-0566
Figure 1: ProtoNode Part Numbers	

- FPC-N34 units have the following 3 ports: RS-485 + Ethernet + RS-485
- FPC-N35 units have the following 3 ports: LonWorks + Ethernet + RS-485

#### 3.2 Point Count Capacity

The total number of points presented by the device(s) attached to the ProtoNode cannot exceed:

Part number	Total Points
FPC-N34-0565	1,500
FPC-N35-0566	1,500
Figure 2: Supported Point Count Capacity	

Devices	Points Per Device
Sola	37
DynaFLO	12
Valiant	200
Figure 3: Points per Device	

### 3.3 Configuring Device Communications

#### 3.3.1 Confirm the Device and ProtoNode COM Settings Match

- **Any connected serial device MUST have the same baud rate, data bits, stop bits, and parity settings as the ProtoNode.**
- **Figure 4** specifies the device serial port settings required to communicate with the ProtoNode.

Port Setting	Sola	Valiant	DynaFLO
Protocol	Modbus RTU	Modbus RTU	Modbus RTU
Baud Rate	38400	9600	19200
Parity	None	None	None
Data Bits	8	8	8
Stop Bits	1	2	1
Figure 4: COM Settings			

#### 3.3.2 Set Node-ID for Any Device Attached to the ProtoNode

- Set Node-ID for any device attached to ProtoNode. The Node-ID needs to be uniquely assigned between 1 and 255.
- Document the Node-ID that is assigned to any device. The Node-ID assigned is used for deriving the Device Instance for BACnet/IP and BACnet MS/TP. (**Section 3.5.2**)

**NOTE:** The Metasys N2 or Modbus TCP/IP field protocol Node-ID is automatically set to be the same value as the Node-ID of the device.

### 3.4 Selecting the Desired Protocol Configuration

- ProtoNode FPC-N34 units use the “S” bank of DIP switches (S0 – S3) to select the protocol configuration.
  - See the table in [Figure 5](#) for the switch settings to select
  - The OFF position is when the DIP switches are set closest to the outside of the box
- ProtoNode FPC-N35 units do not use the “S” bank DIP switches (S0 – S3) to select a field protocol.
  - On ProtoNode FPC-N35 units, these switches are disabled; the field protocol is always LonWorks

**NOTE:** When setting DIP switches, ensure that power to the board is OFF.

### 3.5 BMS Network Settings: MAC Address, Device Instance and Baud Rate

#### 3.5.1 BACnet MS/TP (FPC-N34): Setting the MAC Address for BMS Network

- Only 1 MAC Address is set for ProtoNode regardless of how many devices are connected to ProtoNode.
- Set the BACnet MS/TP MAC Address of the ProtoNode to a value between 1 to 127 (Master MAC Address); this is so that the BMS front end can find ProtoNode via BACnet Auto-Discovery.

**NOTE: Never set a BACnet MS/TP MAC Address of the ProtoNode to a value from 128 to 255. Addresses from 128 to 255 are Slave Addresses and cannot be discovered by BMS front ends that support Auto-Discovery of BACnet MS/TP devices.**

- Set “A” bank DIP switches A0 – A7 to assign a MAC Address to the ProtoNode for BACnet MS/TP.
- Refer to [Appendix D.1](#) for the complete range of MAC Addresses and DIP switch settings.

**NOTE: When setting DIP switches, ensure that power to the board is OFF.**

### 3.5.2 BACnet (FPC-N34): Calculating the Default Device Instance

- The Device Instance value is automatically generated using the following formula:

$$\text{BACnet Device Instance} = (\text{Device Node ID}) + (\text{Default Node Offset})$$

**NOTE: The default Node Offset is 50,000.**

For example, if Device A has a Node ID of 1 and Device B has a Node ID of 2, then:

$$\text{BACnet Device Instance A} = (1) + (50000) = 50001$$

$$\text{BACnet Device Instance B} = (2) + (50000) = 50002$$

**NOTE: The Node ID is set in Section 3.3.2.**

- To reach a specific BACnet Device Instance result, refer to **Section 5.6**.

### 3.5.3 FPC-N34: Setting the Baud Rate for BMS Network

- DIP switches B0 – B3 can be used to set the field baud rate of the ProtoNode to match the baud rate required by the BMS for BACnet MS/TP.
- The ProtoNode baud rate for Metasys N2 is set for 9600. DIP switches B0 – B3 are disabled for Metasys N2 on the ProtoNode FPC-N34.
- DIP switches B0 – B3 are disabled on the ProtoNode FPC-N35 (LonWorks).

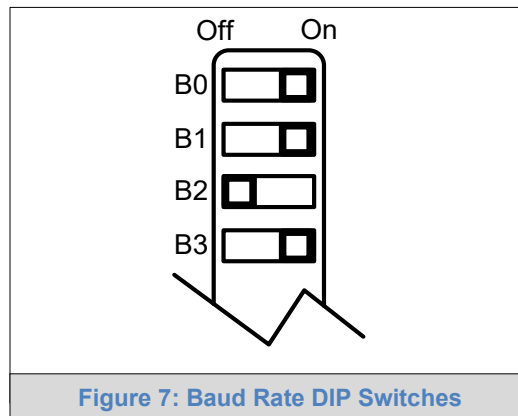

Figure 7: Baud Rate DIP Switches

**NOTE: When setting DIP switches, ensure that power to the board is OFF.**

#### 3.5.3.1 Baud Rate DIP Switch Selection

Baud	B0	B1	B2	B3
9600	On	On	On	Off
19200	Off	Off	Off	On
<b>38400*</b>	<b>On</b>	<b>On</b>	<b>Off</b>	<b>On</b>
57600	Off	Off	On	On
76800	On	Off	On	On

Figure 8: BMS Baud Rate

\* Factory default setting = 38400

## 4 INTERFACING PROTONODE TO DEVICES

### 4.1 Connection from DynaFlame/Dynaforce/Advantus/Avenger to ProtoNode

The DynaFlame®/Dynaforce® terminals J3-MB2 (+, -) are connected to the Protonode as shown.

Configure > > "sola" (without the quotation)

Configure > **System Identification & Access**

**DynaForce 3000**  
System Identification & Access

**SOLA**

Product type **Commercial Hydronic Boiler**  
OS number **R7910A1001 R7910A1001s1n**  
Software Version **3468.2550** Date code **1213**  
Application revision **14** Safety revision **10** Model **247**

OEM password

OEM ID

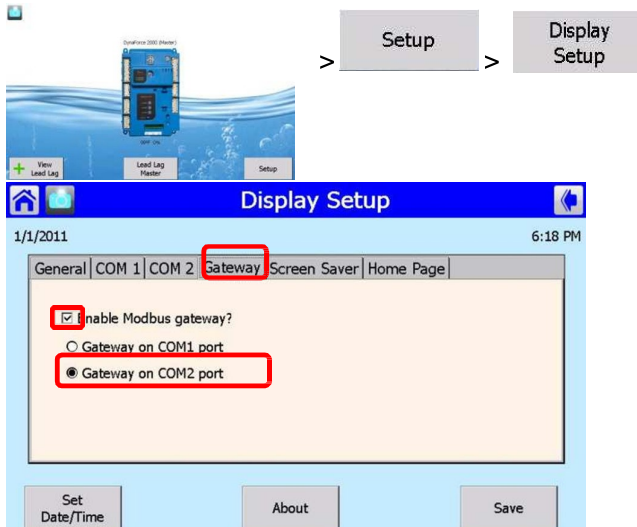

MB1 Modbus address

MB2 Modbus address

Factory data

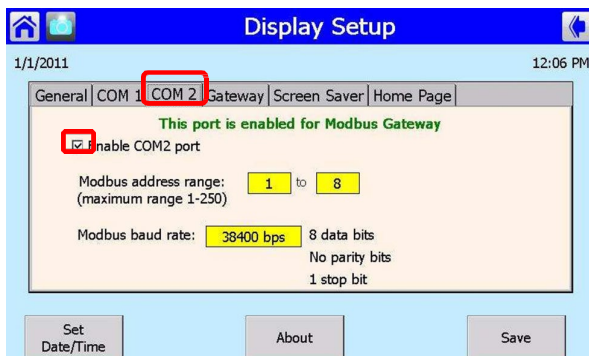

- Boiler 1: MB1 Modbus Address = MB2 Modbus Address = 1
- Boiler 2: MB2 Modbus Address = MB2 Modbus Address = 2 etc.

### Activating Comm. Port 2 on Sola Display

> Select Gateway tab

- 1) Select Gateway tab
- 2) Check Enable Modbus gateway
- 3) Select Gateway on COM2 port

- 1) Select COM2 tab
- 2) Check Enable COM2 port

### Verify activity on COM2 port

Display Diagnostics

Version: 1.3    Memory: 16.3MB out of 38.4MB available    Build: 73

USB Status: **NOT FOUND**

COM 1		Enabled	Bytes	Packets	Rate (bps)	
Receive:			412262	23358	4512	Clear
Transmit:			186918	23365	1920	Pause

COM 2		Enabled	Bytes	Packets	Rate (bps)	
Receive:			44475	5555	576	Clear
Transmit:			47146	5534	912	Pause

Calibrate Screen
Audio Test
Video Test
Screen Snapshot
Display Reset

COM1: Modbus data between Diana and SOLA

COM2: Modbus data between Diana and front end (Modbus) or ProtoNode

## 4.2 Connection from DynaMaxHS to ProtoNode

### Programming DynaMax<sup>HS</sup>

Place Local/Modbus toggle switch in LOCAL

Press and select Login, enter "sola"  
Select Advanced Setup

Select System

Select System ID & Access

Verify MB1 Modbus address = 1. To be in sequential order.

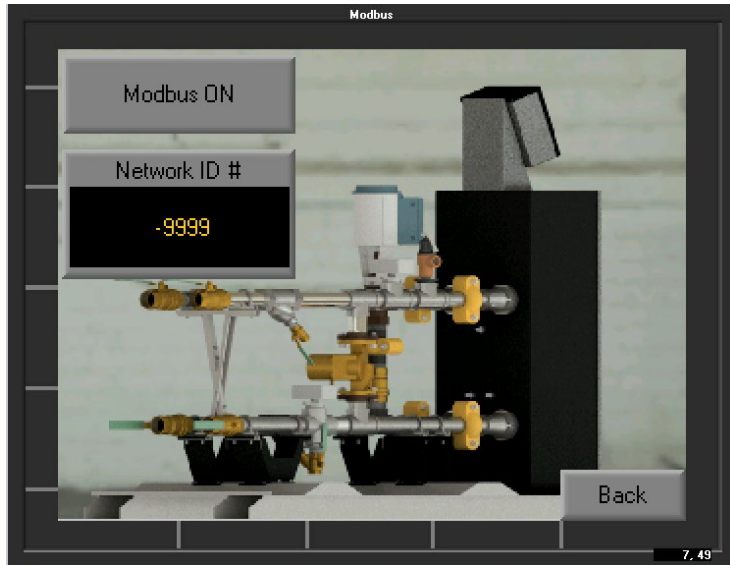

Verify MB2 Modbus address = 1. To be in sequential order.

Place Local/Modbus toggle switch in BMS

### 4.3 Connection from DynaFLO to ProtoNode

Start-up screen > Setup (password:3232) > Modbus:

Assign a network ID or slave address to DynaFLO's controller by pressing <Network ID #> and inserting a number. Make sure the <Modbus ON> is switched to "Modbus ON".

When <Modbus ON/OFF> switch turns ON, it opens Port 2 on DynaFLO's controller and sets the controller as a Modbus Slave.

Use the RJ11 cable connector shown below (provided with your DynaFLO) or a similar RJ11 (6POS2C) cable to connect to Port 2 of your DynaFLO's PLC.

Pin Number	Function
1	A signal (+) TX+/RX+
6	B signal (-) TX-/RX-

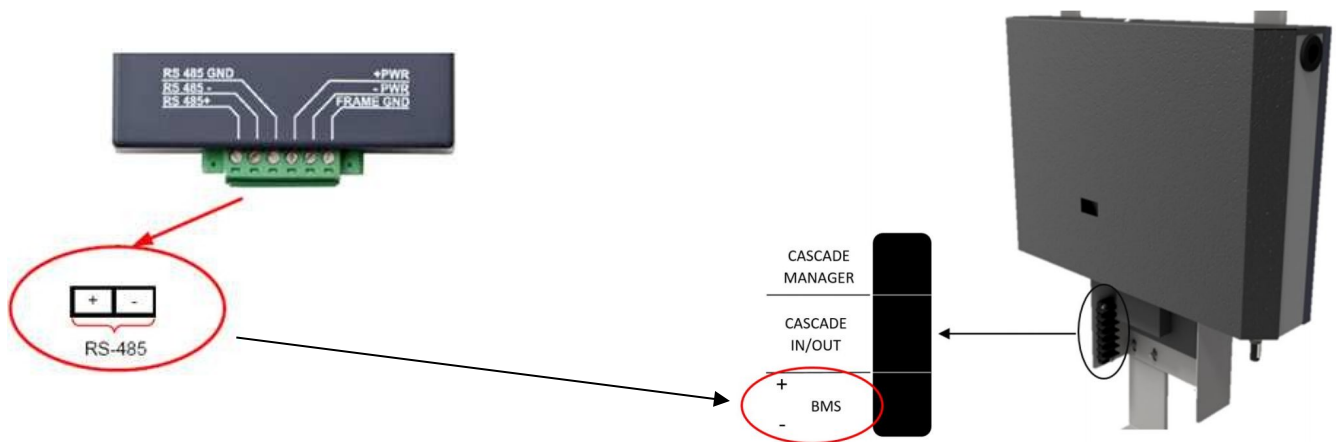

Having access to pins 1 and 6 of Port2 on DynaFLO by using the RJ11 (6POS2C) cable, make connections to the Protonode according to the above table:

Please refer to appendix C.2 for DynaFLO's Modbus mapping table. **Note that DynaFLO needs to be put into <Remote\_SP> from the "Control" menu before setpoint can be changed remotely.**

#### 4.4 Connection from Valiant to ProtoNode

The RS-485 connection is made by connecting wires from the Protonode to the terminal block located under the Valiant's control panel. The designated BMS terminals are labelled as shown in the image below for ease of identification:

The slave address can be changed from the Valiant's pushbutton screen. To change the slave address go to Menu>Settings>General Settings>Other Settings>Modbus Address

**Note: Do not change “Modbus Stopbits”!**

Please refer to appendix C.3 for Valiant's Modbus mapping table.

#### 4.5 ProtoNode FPC-N34 and FPC-N35 Showing Connection Ports

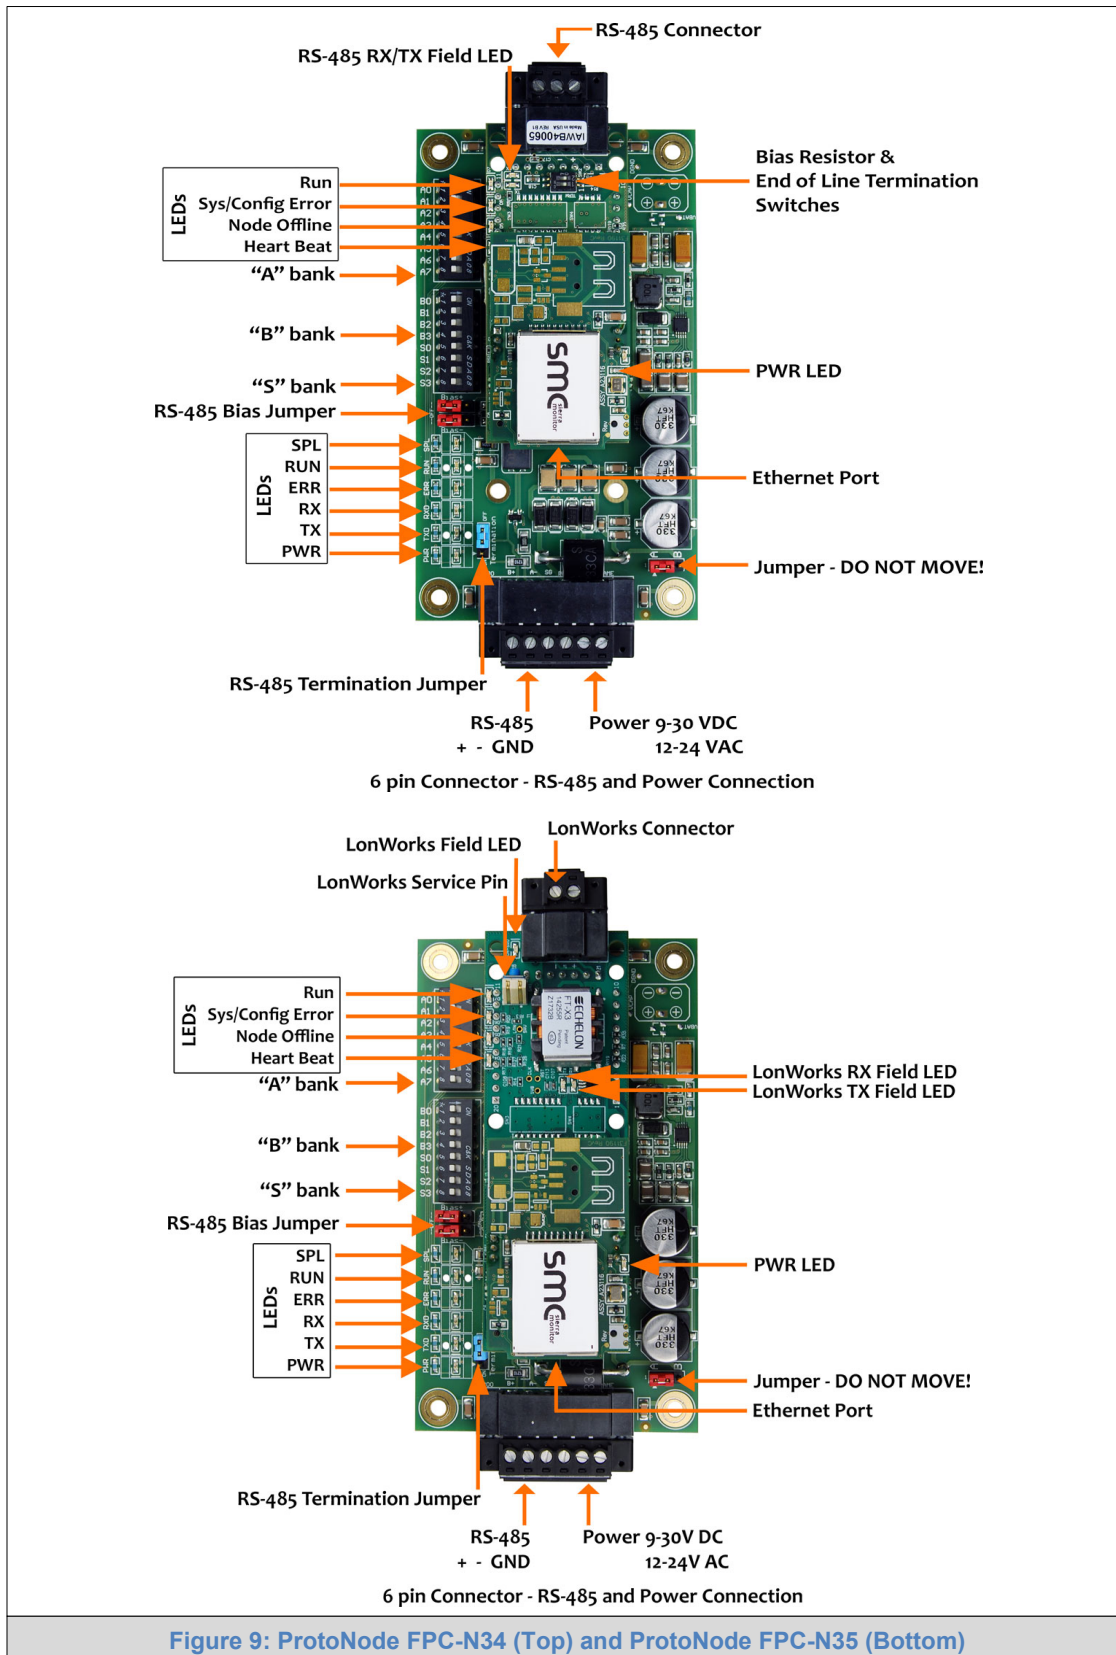

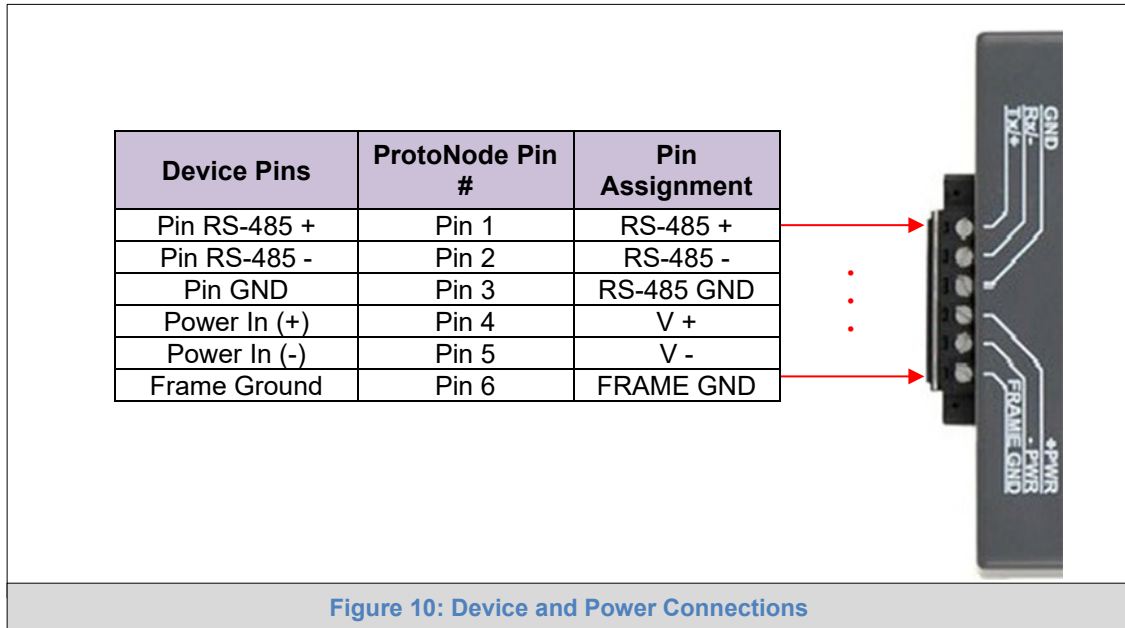

Figure 9: ProtoNode FPC-N34 (Top) and ProtoNode FPC-N35 (Bottom)

## 4.6 Serial Device Connections to the ProtoNode

### ProtoNode 6 Pin Phoenix connector:

- The 6 pin Phoenix connector is the same for ProtoNode FPC-N34 and FPC-N35 (LonWorks).
- Pins 1 through 3 are for RS-485 devices.
  - Use standard grounding principles for RS-485 GND
- Pins 4 through 6 are for power. **Do not connect power until Section 4.5.**

#### 4.6.1 Biasing the RS-485 Device Network

- An RS-485 network with more than one device needs to have biasing to ensure proper communication. The biasing only needs to be done on one device.
- The ProtoNode has 510 ohm resistors that can be used to set the biasing. The ProtoNode's default positions from the factory for the biasing jumpers are OFF.
- The OFF position is when the 2 red biasing jumpers straddle the 4 pins closest to the outside of the board of the ProtoNode. (**Figure 11**)
- **Only turn biasing ON:**
  - **IF the BMS cannot see more than one device connected to the ProtoNode**
  - **AND all the settings (COM settings, wiring, and DIP switches) have been checked**
- To turn biasing ON, move the 2 red biasing jumpers to straddle the 4 pins closest to the inside of the board of the ProtoNode.

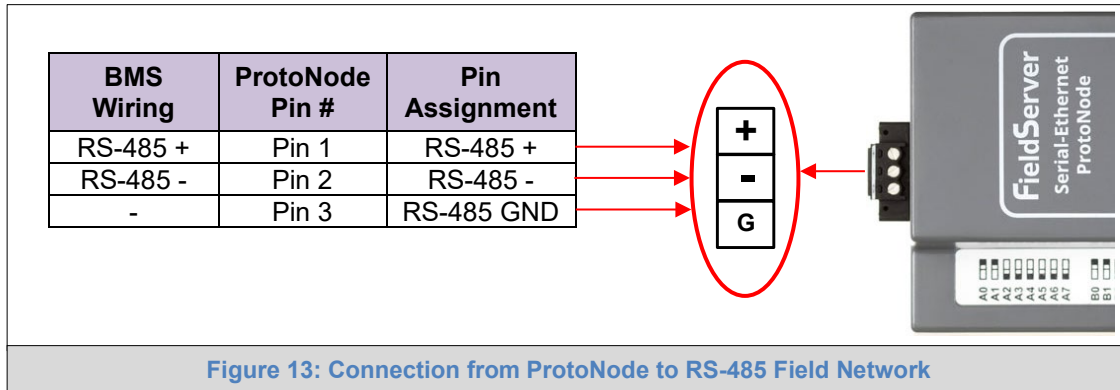

#### 4.6.2 End of Line Termination Switch for the RS-485 Device Network

- On long RS-485 cabling runs, the RS-485 trunk must be properly terminated at each end.
- The ProtoNode has an end of line (EOL) blue jumper. The default setting for this blue EOL switch is OFF with the jumper straddling the pins closest to the inside of the board of the ProtoNode.
  - On short cabling runs the EOL switch does not need to be turned ON
- **If the ProtoNode is placed at one of the ends of the trunk, set the blue EOL jumper to the ON position straddling the pins closest to the outside of the board of the ProtoNode.**
- **Always leave the single red jumper in the A position (default factory setting).**

#### 4.7 Serial Network (FPC-N34): Wiring Field Port to RS-485 Network

- Connect the RS-485 network wires to the 3-pin RS-485 connector on ProtoNode as shown below in [Figure 13](#).
  - Use standard grounding principles for RS-485 GND
- See [Section 5.5](#) for information on connecting to an Ethernet network.

- If the ProtoNode is the last device on the trunk, then the end of line (EOL) termination switch needs to be enabled. See [Figure 14](#) for the orientation of switch positions referenced below.
  - The default setting from the factory is OFF (switch position = right side)
  - To enable the EOL termination, turn the EOL switch ON (switch position = left side)

- If more than one RS-485 device is connected to the network, then the field bias resistor switch needs to be enabled to ensure proper communication. See [Figure 14](#) for the orientation of switch positions referenced below.
  - The default factory setting is OFF (switch position = right side)
  - To enable biasing, turn the bias switch ON (switch position = left side)

**NOTE:** Biasing only needs to be enabled on one device. The ProtoNode has 510 ohm resistors that are used to set the biasing.

#### 4.8 LonWorks (FPC-N35): Wiring LonWorks Devices to the LonWorks Terminal

- Wire the LonWorks device network to the ProtoNode LonWorks Terminal.
  - Use approved cable per the FT-10 installation guidelines
  - LonWorks has no polarity.

Figure 15: LonWorks Terminal

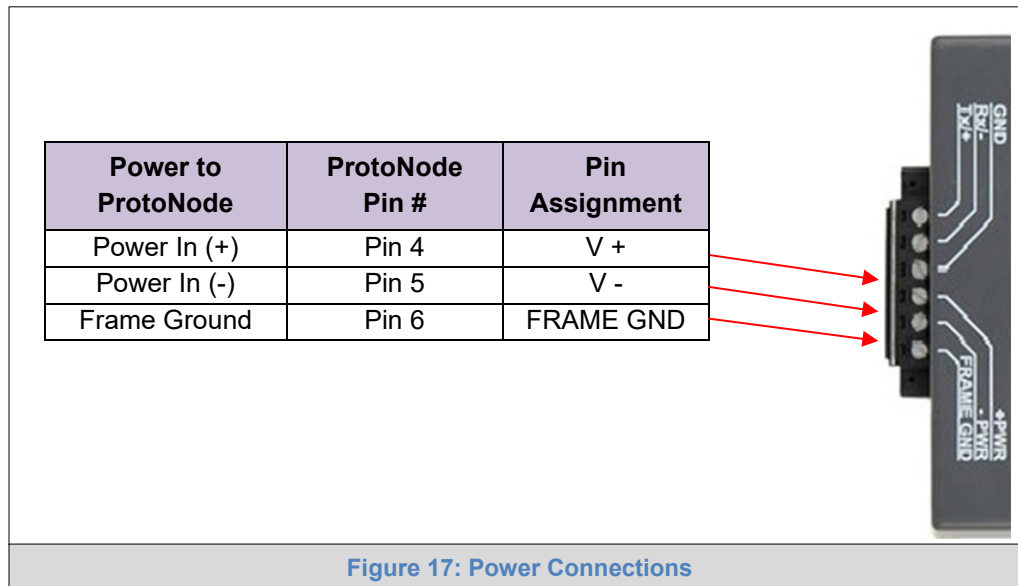

## 4.9 Power-Up ProtoNode

Check power requirements in the table below:

Power Requirement for ProtoNode External Gateway			
	Current Draw Type		
ProtoNode Family	12VDC/AC	24VDC/AC	30VDC
FPC – N34 (Typical)	170mA	100mA	80mA
FPC – N34 (Maximum)	240mA	140mA	100mA
FPC – N35 (Typical)	210mA	130mA	90mA
FPC – N35 (Maximum)	250mA	170mA	110mA
<b>NOTE: These values are 'nominal' and a safety margin should be added to the power supply of the host system. A safety margin of 25% is recommended.</b>			
Figure 16: Required Current Draw for the ProtoNode			

Apply power to the ProtoNode as shown below in [Figure 17](#). Ensure that the power supply used complies with the specifications provided in [Appendix E.1](#).

- ProtoNode accepts either 9-30VDC or 12-24VAC on pins 4 and 5.
- Frame GND should be connected.

## 5 USE THE PROTONODE WEB CONFIGURATOR TO SETUP THE GATEWAY

### 5.1 Connect the PC to the ProtoNode via the Ethernet Port

Connect a Cat-5 Ethernet cable (straight through or cross-over) between the local PC and ProtoNode.

Figure 18: Ethernet Port Location

#### 5.1.1 Changing the Subnet of the Connected PC

The default IP Address for the ProtoNode is **192.168.1.24**, Subnet Mask is **255.255.255.0**. If the PC and ProtoNode are on different IP networks, assign a static IP Address to the PC on the 192.168.1.xxx network.

For Windows 10:

- Find the search field in the local computer's taskbar (usually to the right of the windows icon ) and type in "Control Panel".
- Click "Control Panel", click "Network and Internet" and then click "Network and Sharing Center".
- Click "Change adapter settings" on the left side of the window.
- Right-click on "Local Area Connection" and select "Properties" from the dropdown menu.
- Highlight ☒  Internet Protocol Version 4 (TCP/IPv4) and then click the Properties button.
- Select and enter a static IP Address on the same subnet. For example:

☒ Use the following IP address:

IP address:	192 . 168 . 1 . 11
Subnet mask:	255 . 255 . 255 . 0
Default gateway:	. . .

- Click the Okay button to close the Internet Protocol window and the Close button to close the Ethernet Properties window.

## 5.2 Connecting to the ProtoNode Web Configurator

After setting a local PC on the same subnet as the ProtoNode (**Section 5.1**), open a web browser on the PC and enter the IP Address of the ProtoNode; the default address is 192.168.1.24.

**NOTE:** If the IP Address of the ProtoNode was changed, the assigned IP Address can be discovered using the FS Toolbox utility. See [Appendix A.1](#) for instructions.

## 5.3 Selecting Profiles for Devices Connected to ProtoNode

**NOTE:** If Modbus TCP/IP was selected in [Section 3.4](#) for the Field/BMS protocol, skip this section. Device profiles are NOT used for Modbus TCP/IP.

- In the Web Configurator, the Active Profiles are shown below the Configuration Parameters. The Active Profiles section lists the currently active device profiles, including previous Web Configurator additions. This list is empty for new installations, or after clearing all configurations. ([Figure 19](#))

## Configuration Parameters

Parameter Name	Parameter Description	Value
mod_baud_rate	<b>Modbus RTU Baud Rate</b> This sets the Modbus RTU baud rate. (9600/19200/38400)	38400 <input type="button" value="Submit"/>
network_nr	<b>BACnet Network Number</b> This sets the BACnet network number of the Gateway. (1 - 65535)	50001 <input type="button" value="Submit"/>
rte_net_num	<b>BACnet Router Network Number</b> This sets the BACnet router network number. Needs to be unique across the BACnet network. (1 - 65534)	50002 <input type="button" value="Submit"/>
int_net_num	<b>BACnet Internal Network Number</b> This is used for internal BACnet traffic. Needs to be unique across the BACnet network. (1 - 65534)	50003 <input type="button" value="Submit"/>
node_offset	<b>BACnet Node Offset</b> This is used to set the BACnet device instance. The device instance will be sum of the Modbus device address and the node offset. (0 - 4194303)	50000 <input type="button" value="Submit"/>
bac_ip_port	<b>BACnet IP Port</b> This sets the BACnet IP port of the Gateway. The default is 47808. (1 - 65535)	47808 <input type="button" value="Submit"/>
bac_bbmd_option	<b>BACnet BBMD</b> This enables BBMD on the BACnet IP connection. Use BBMD to enable. Use - to disable. The bdt.ini files also needs to be downloaded. (BBMD/-)	- <input type="button" value="Submit"/>
bac_cov_option	<b>BACnet COV</b> This enables or disables COVs for the BACnet connection. Use COV_Enable to enable. Use COV_Disable to disable. (COV_Enable/COV_Disable)	COV_Disable <input type="button" value="Submit"/>
bac_virt_nodes	<b>BACnet Virtual Server Nodes</b> Set to NO if the unit is only converting 1 device to BACnet. Set to YES if the unit is converting multiple devices. (No/Yes)	No <input type="button" value="Submit"/>

### Active profiles

Nr	Node ID	Current profile	Parameters
<input type="button" value="Add"/>			

Powered by

Figure 19: Web Configurator Showing no Active Profiles

- To add an active profile to support a device, click the Add button under the Active Profiles heading. Select a profile from the drop-down menu field that appears underneath the Current profile column.

**NOTE:** If multiple devices are connected to the ProtoNode, set the BACnet Virtual Server Nodes field to “Yes”; otherwise leave the field on the default “No” setting.

- Once the Profile for the device has been selected from the drop-down list, enter the value of the device’s Node-ID which was assigned in [Section 3.3.2](#).

Figure 20: Web Configurator Showing Available Profile Selection

- Then press the “Submit” button to add the Profile to the list of devices to be configured.
- Repeat this process until all the devices have been added.
- Completed additions are listed under “Active profiles” as shown in [Figure 21](#).

Figure 21: Web Configurator Showing Active Profile Additions

## 5.4 Verify Device Communications

- Check that TX and RX LEDs** are rapidly flashing. See [Appendix A.4](#) for information and images.
- Confirm the software shows communication without errors ([Appendix A.2](#)).

## 5.5 Ethernet Network: Setting IP Address for the Field Network

- Follow the steps outlined in **Section 5.1** to access the ProtoNode Web Configurator.
- To access the FS-GUI, click on the “Diagnostics & Debugging” button in the bottom right corner of the page.

**Configuration Parameters**

Parameter Name	Parameter Description	Value	
mod_baud_rate	<b>Modbus RTU Baud Rate</b> This sets the Modbus RTU baud rate. (9600/19200/38400)	38400	Submit
network_nr	<b>BACnet Network Number</b> This sets the BACnet network number of the Gateway. (1 - 65535)	50001	Submit
rte_net_num	<b>BACnet Router Network Number</b> This sets the BACnet router network number. Needs to be unique across the BACnet network. (1 - 65534)	50002	Submit
int_net_num	<b>BACnet Internal Network Number</b> This is used for internal BACnet traffic. Needs to be unique across the BACnet network. (1 - 65534)	50003	Submit
node_offset	<b>BACnet Node Offset</b> This is used to set the BACnet device instance. The device instance will be sum of the Modbus device address and the node offset. (0 - 4194303)	50000	Submit
bac_ip_port	<b>BACnet IP Port</b> This sets the BACnet IP port of the Gateway. The default is 47808. (1 - 65535)	47808	Submit
bac_bbmd_option	<b>BACnet BBMD</b> This enables BBMD on the BACnet IP connection. Use BBMD to enable. Use - to disable. The bdt.ini files also needs to be downloaded. (BBMD/-)	-	Submit
bac_cov_option	<b>BACnet COV</b> This enables or disables COVs for the BACnet connection. Use COV_Enable to enable. Use COV_Disable to disable. (COV_Enable/COV_Disable)	COV_Disable	Submit
bac_virt_nodes	<b>BACnet Virtual Server Nodes</b> Set to NO if the unit is only converting 1 device to BACnet. Set to YES if the unit is converting multiple devices. (No/Yes)	No	Submit

[HELP \(?\)](#)
[Network Settings](#)
[Clear Profiles and Restart](#)
[System Restart](#)
[Diagnostics & Debugging](#)

Powered by **FieldServer**

**Figure 22: Web Configurator Screen with Active Profiles**

- From the FS-GUI landing page, click on “Setup” to expand the navigation tree and then select “Network Settings” to access the IP Settings menu. (Figure 23)

The screenshot shows the FS-GUI interface for the Camus ProtoNode. On the left is a navigation tree with 'Setup' expanded and 'Network Settings' selected. The main area is titled 'Network Settings' and contains a 'Note' about system restarts. Below the note are input fields for N1 IP Address (10.40.50.90), N1 Netmask (255.255.255.0), N1 DHCP Client State (DISABLED), Default Gateway (10.40.50.1), Domain Name Server1 (10.5.4.226), and Domain Name Server2 (10.5.4.227). At the bottom are 'Cancel' and 'Update IP Settings' buttons. A 'System Restart' button is also visible at the bottom of the page.

Figure 23: Changing IP Address via FS-GUI

- Modify the IP Address (N1 IP Address field) of the ProtoNode Ethernet port.
- If necessary, change the Netmask (N1 Netmask field).
- If necessary, change the IP Gateway (Default Gateway field).

**NOTE: If the ProtoNode is connected to a managed switch/router, the IP Gateway of the ProtoNode should be set to the IP Address of that managed switch/router.**

- Click the “System Restart” button at the bottom of the page to apply changes and restart the ProtoNode.
- Unplug Ethernet cable from PC and connect it to the network switch or router.
- Record the IP Address assigned to the ProtoNode for future reference.

**NOTE: The SMC Cloud button** (see Figure 23) allows users to connect to the SMC Cloud, MSA Safety’s device cloud solution for IIoT. The SMC Cloud enables secure remote connection to field devices through a FieldServer and its local applications for configuration, management, maintenance. For more information about the SMC Cloud, refer to the [SMC Cloud Start-up Guide](#).

## 5.6 BACnet: Setting Node\_Offset to Assign Specific Device Instances

- Follow the steps outlined in **Section 5.1** to access the ProtoNode Web Configurator.
- Node\_Offset field shows the current value (default = 50,000).
  - The values allowed for a BACnet Device Instance can range from 1 to 4,194,303
- To assign a specific Device Instance (or range); change the Node\_Offset value as needed using the calculation below:

$$\text{Device Instance (desired)} = \text{Node\_Offset} + \text{Node\_ID}$$

For example, if the desired Device Instance for the device 1 is 50,001 and the following is true:

- Device 1 has a Node-ID of 1
- Device 2 has a Node-ID of 22
- Device 3 has a Node-ID of 33

Then plug the device 1's information into the formula to find the desired Node\_Offset:

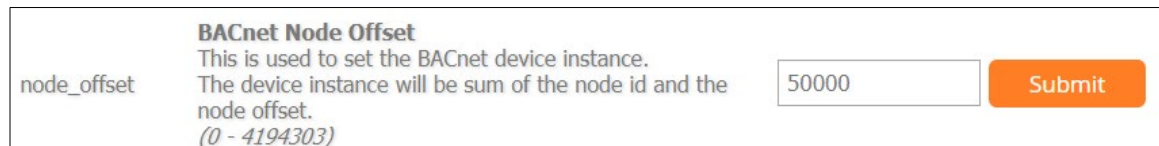

$$50,001 = \text{Node\_Offset} + 1$$

$$\Rightarrow 50,000 = \text{Node\_Offset}$$

Once the Node\_Offset value is input, it will be applied as shown below:

- Device 1 Instance = 50,000 + Node\_ID = 50,000 + 1 = 50,001
- Device 2 Instance = 50,000 + Node\_ID = 50,000 + 22 = 50,022
- Device 3 Instance = 50,000 + Node\_ID = 50,000 + 33 = 50,033

- Click "Submit" once the desired value is entered.

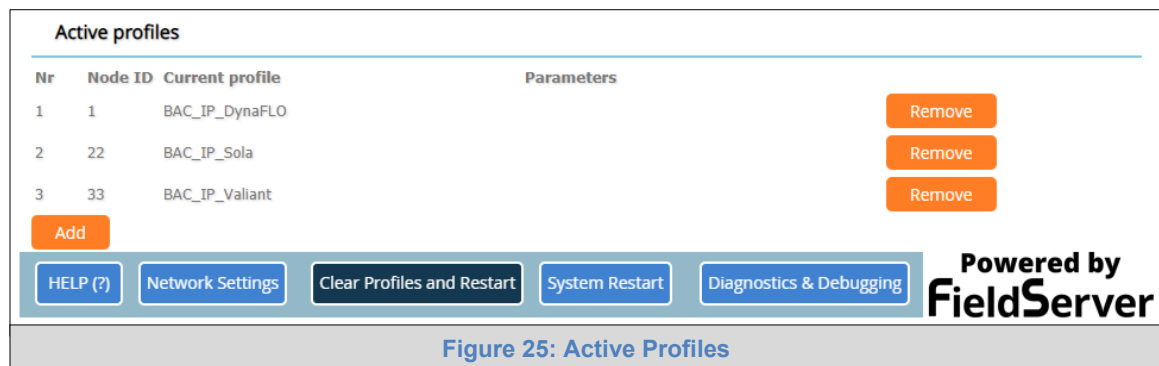

**BACnet Node Offset**  
This is used to set the BACnet device instance. The device instance will be sum of the node id and the node offset.  
(0 - 4194303)

node\_offset

50000

Submit

Figure 24: Web Configurator Node Offset Field

**Active profiles**

HELP (?) Network Settings Clear Profiles and Restart System Restart Diagnostics & Debugging

Powered by FieldServer

Figure 25: Active Profiles

## 5.7 How to Start the Installation Over: Clearing Profiles

- Follow the steps outlined in **Section 5.1** to access the ProtoNode Web Configurator.
- At the bottom-left of the page, click the “Clear Profiles and Restart” button.
- Once restart is complete, all past profiles discovered and/or added via Web configurator are deleted. The unit can now be reinstalled.

## 6 LONWORKS (FPC-N35): COMMISSIONING PROTONODE ON A LONWORKS NETWORK

Commissioning may only be performed by the LonWorks administrator.

### 6.1 Commissioning ProtoNode FPC-N35 on a LonWorks Network

During the commissioning process, the LonWorks administrator may prompt the user to hit the service pin on the ProtoNode FPC-N35 at a specific point (this step occurs at different points of the commissioning process for each LonWorks network management tool).

- If an XIF file is required, see steps in **Section 6.1.1** to generate XIF.

Figure 26: LonWorks Service Pin Location

#### 6.1.1 Instructions to Upload XIF File from ProtoNode FPC-N35 Using Browser

- Connect a Cat-5 Ethernet cable (straight through or cross-over) between the PC and ProtoNode.
- The default IP Address for the ProtoNode is **192.168.1.24**, Subnet Mask is **255.255.255.0**. If the PC and ProtoNode are on different IP networks, assign a static IP Address to the PC on the 192.168.1.xxx network.

For Windows 10:

- Find the search field in the local computer's taskbar (usually to the right of the windows icon ) and type in "Control Panel".
- Click "Control Panel", click "Network and Internet" and then click "Network and Sharing Center".
- Click "Change adapter settings" on the left side of the window.
- Right-click on "Local Area Connection" and select "Properties" from the dropdown menu.
- Highlight ☒  **Internet Protocol Version 4 (TCP/IPv4)** and then click the Properties button.
- Select and enter a static IP Address on the same subnet. For example:

☒ Use the following IP address:

IP address:	192 . 168 . 1 . 11
Subnet mask:	255 . 255 . 255 . 0
Default gateway:	. . .

- Click the Okay button to close the Internet Protocol window and the Close button to close the Ethernet Properties window.
- Open a web browser and go to the following address: [IP Address of ProtoNode]/fserver.xif
  - Example: 192.168.1.24/fserver.xif
- If the web browser prompts to save the file, save the file onto the PC. If the web browser displays the xif file as a web page, save the file onto the local PC as "fserver.xif".

```

**Figure 27: Sample of Fserver.XIF File Generated**

## 7 USING THE EMBEDDED BACNET EXPLORER

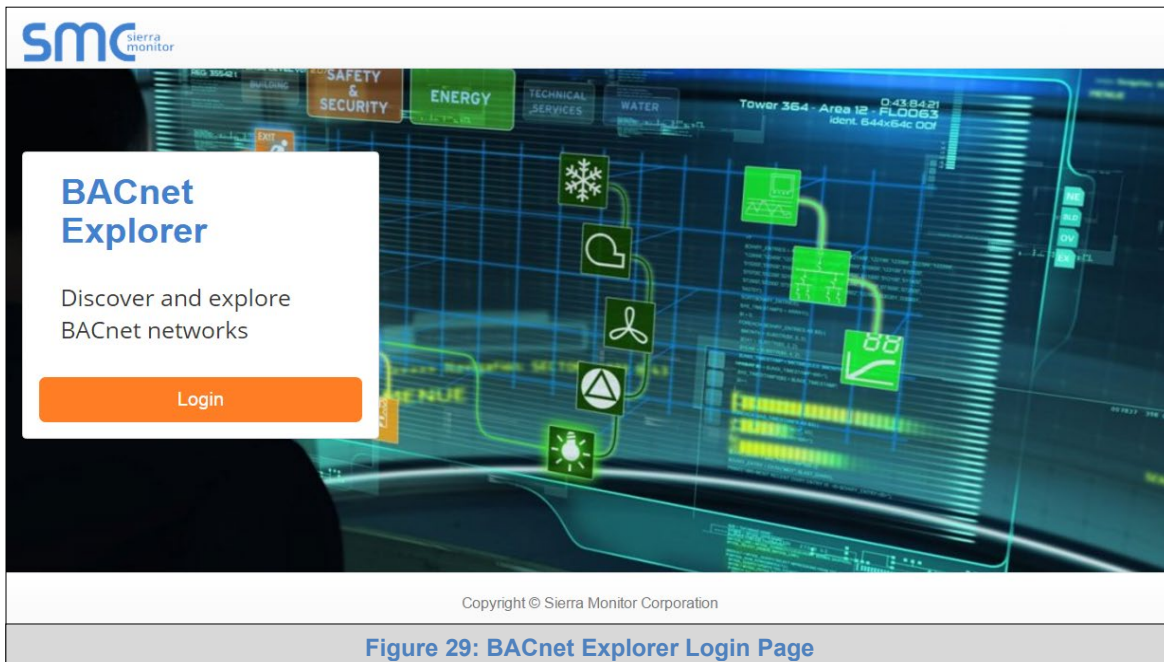

The embedded BACnet Explorer allows installers of the OEM product to validate that their equipment is working on BACnet without having to ask the BMS integrator to test the unit.

- To access the embedded BACnet Explorer, go to the FS-GUI page and click the Explorer button.

- Then login to the BACnet Explorer page using the supplied username and password.

**NOTE:** The default user name is “admin” and the default password is “admin”.

**NOTE:** For BACnet/IP, click on the Settings button on the left side of the landing page to ensure the ProtoNode is on the BACnet/IP network subnet or to configure BBMD.

## 7.1 Discover Device List

- From the BACnet Explorer landing page, click on the BACnet Explorer button on the left side of the screen to go to the BACnet Explorer page.

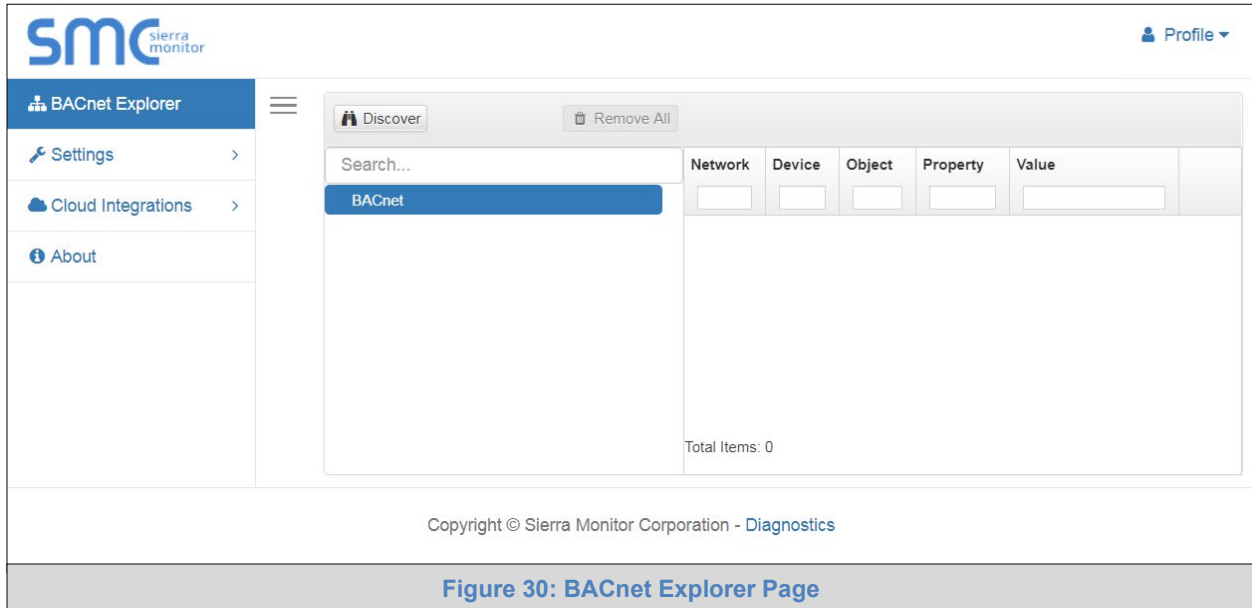

Figure 30: BACnet Explorer Page

- To discover the devices connected to the same subnet as the BACnet Explorer, click the Discover button  (binocular icon).
- This will open the Discover window, click the checkboxes next to the desired search settings and click Discover to start the search.

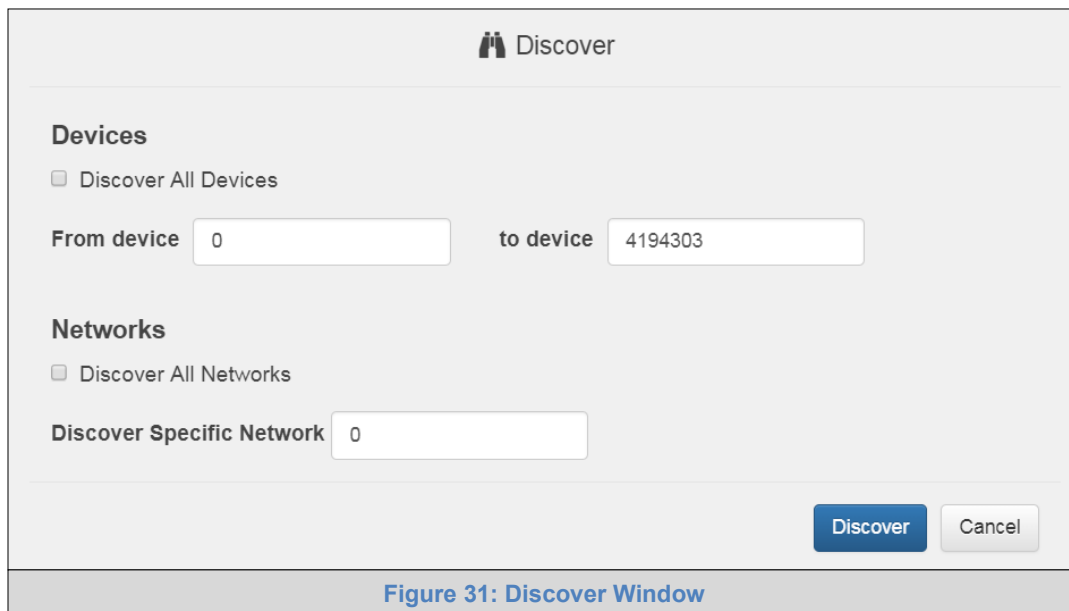

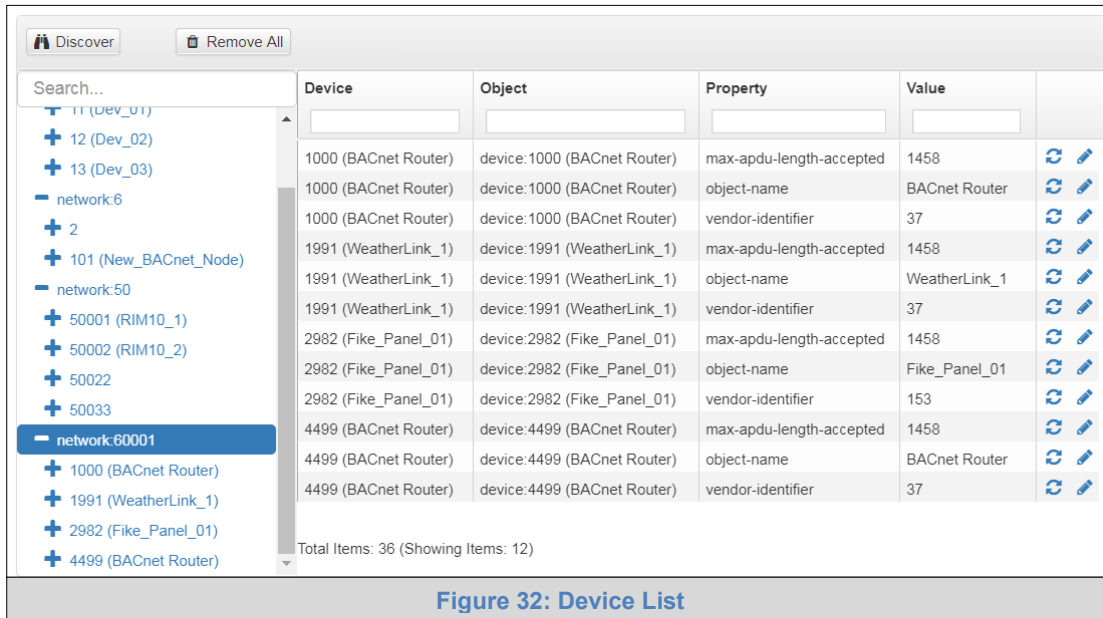

Figure 31: Discover Window

**NOTE:** The “Discover All Devices” or “Discover All Networks” checkboxes must be unchecked to search for a specific device range or network.

**NOTE:** Allow the devices to populate before interacting with the device list for optimal performance. Any discovery or explore process will cause a green message to appear in the upper right corner of the browser to confirm that the action is complete.

The screenshot shows the 'Discover' tab with a 'Remove All' button. A search bar is at the top left. Below it is a list of devices and networks. The main table has columns: Device, Object, Property, Value, and two action icons (refresh and edit). The table lists various devices including BACnet Routers, WeatherLink\_1, and Fike\_Panel\_01. The status at the bottom indicates 'Total Items: 36 (Showing Items: 12)'.

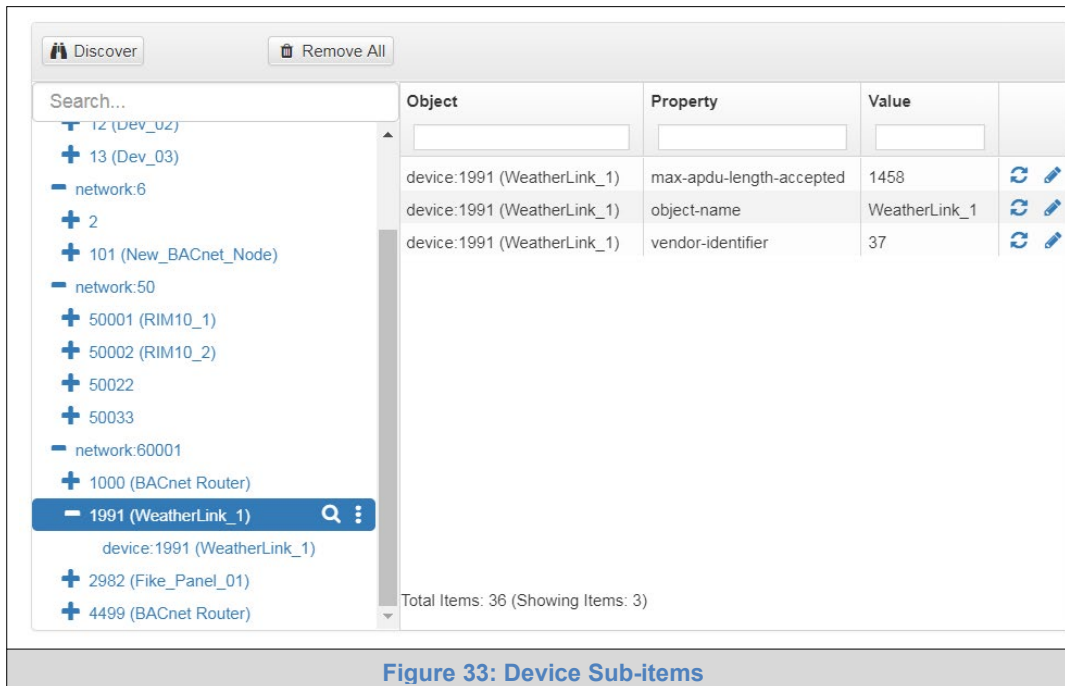

Device	Object	Property	Value		
1000 (BACnet Router)	device:1000 (BACnet Router)	max-apdu-length-accepted	1458	↺	✎
1000 (BACnet Router)	device:1000 (BACnet Router)	object-name	BACnet Router	↺	✎
1000 (BACnet Router)	device:1000 (BACnet Router)	vendor-identifier	37	↺	✎
1991 (WeatherLink_1)	device:1991 (WeatherLink_1)	max-apdu-length-accepted	1458	↺	✎
1991 (WeatherLink_1)	device:1991 (WeatherLink_1)	object-name	WeatherLink_1	↺	✎
1991 (WeatherLink_1)	device:1991 (WeatherLink_1)	vendor-identifier	37	↺	✎
2982 (Fike_Panel_01)	device:2982 (Fike_Panel_01)	max-apdu-length-accepted	1458	↺	✎
2982 (Fike_Panel_01)	device:2982 (Fike_Panel_01)	object-name	Fike_Panel_01	↺	✎
2982 (Fike_Panel_01)	device:2982 (Fike_Panel_01)	vendor-identifier	153	↺	✎
4499 (BACnet Router)	device:4499 (BACnet Router)	max-apdu-length-accepted	1458	↺	✎

4499 (BACnet Router)	device:4499 (BACnet Router)	vendor-identifier	37	↺	✎

Total Items: 36 (Showing Items: 12)

**Figure 32: Device List**

## 7.2 View Device Details and Explore Points/Parameters

- To view the device details, click the blue plus sign (+) next to the desired device in the list.
  - This will show only some of the device properties for the selected aspect of a device

The screenshot shows the 'Discover' tab with the same search bar and device list. The device '1991 (WeatherLink\_1)' is selected and expanded, showing its sub-items. The main table now displays only the properties for this selected device. The status at the bottom indicates 'Total Items: 36 (Showing Items: 3)'.

Object	Property	Value		
device:1991 (WeatherLink_1)	max-apdu-length-accepted	1458	↺	✎
device:1991 (WeatherLink_1)	object-name	WeatherLink_1	↺	✎
device:1991 (WeatherLink_1)	vendor-identifier	37	↺	✎

Total Items: 36 (Showing Items: 3)

**Figure 33: Device Sub-items**

- To view the full details of a device, highlighting the device directly (in [Figure 34](#) “1991 WeatherLink\_1”) and click the Explore button (🔍) that appears to the right of the highlighted device as a magnifying glass icon or double-click the highlighted device.

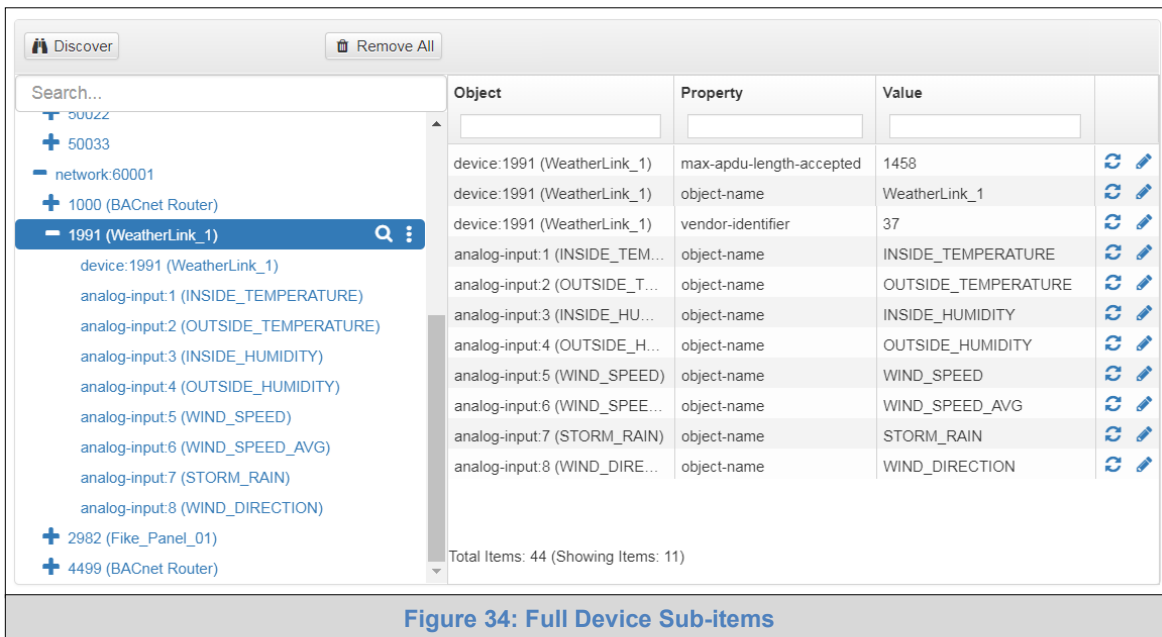

Figure 34: Full Device Sub-items

- Now additional device details are viewable; however, the device can be explored even further
- Click on one of the device details.

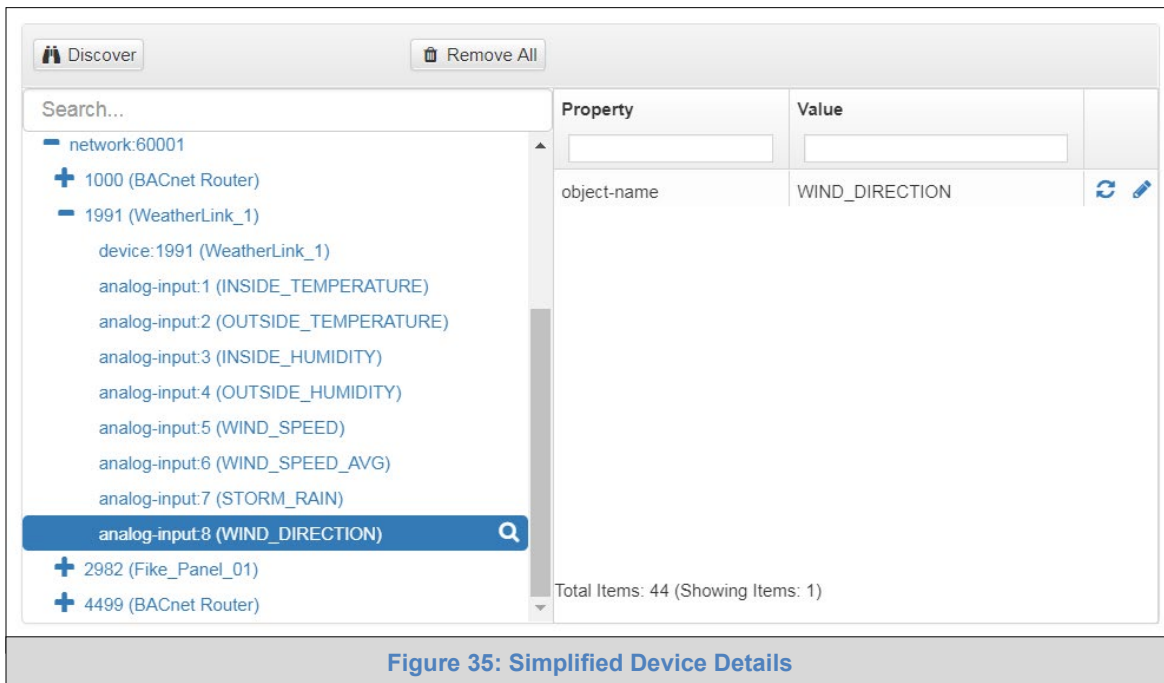

Figure 35: Simplified Device Details

- Then click on the Explore button or double-click the device object.

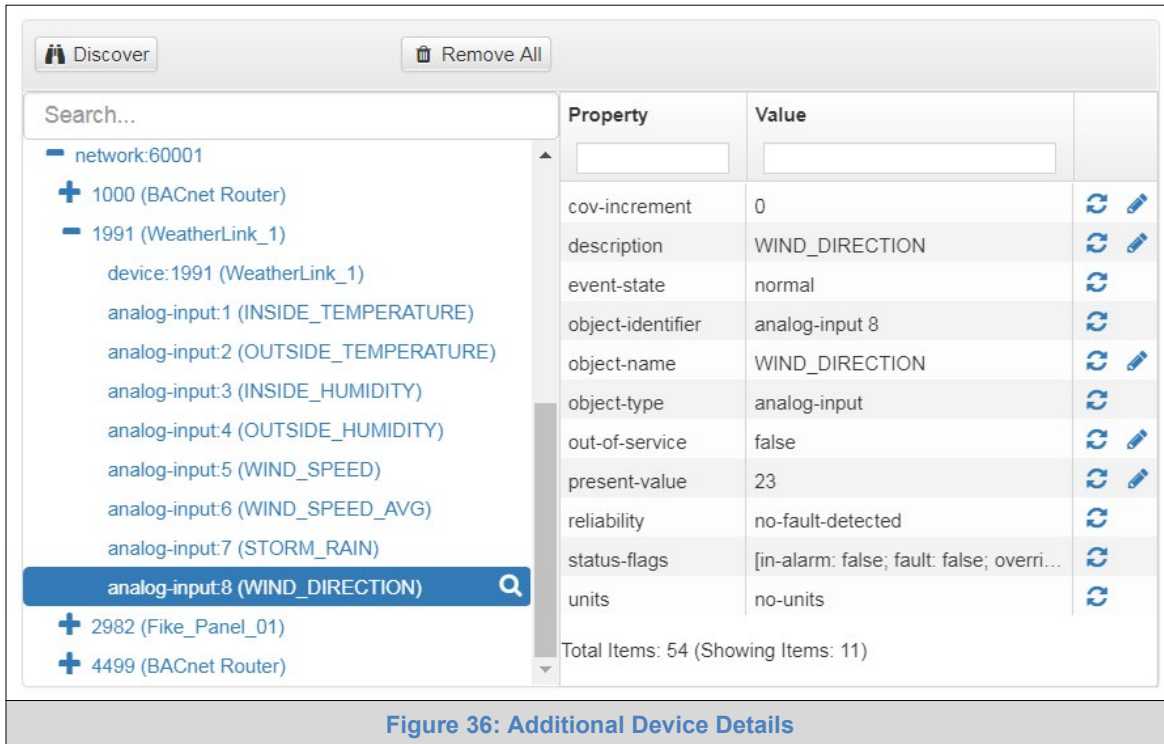

Figure 36: Additional Device Details

A full list of the device details will appear on the right side window. If changes are expected since the last explore, simply press the Refresh button (↻) that appears to right of individual properties to refresh the value.

**NOTE: The Explorer Search Bar will find devices based on their Device ID.**

**NOTE: The Explorer Discovery Tree has 3 levels that correspond to the following.**

- **Network number**
  - **Device**
    - **Device object**

### 7.2.1 Edit the Present Value Field

The only recommended field to edit via BACnet Explorer is the device's present value field.

**NOTE: Other BACnet properties are editable (such as object name, object description, etc.); however, this is not recommended because the BACnet Explorer is a discovery tool not a Building Management System (BMS).**

- To edit the present value, select it in the property listings.

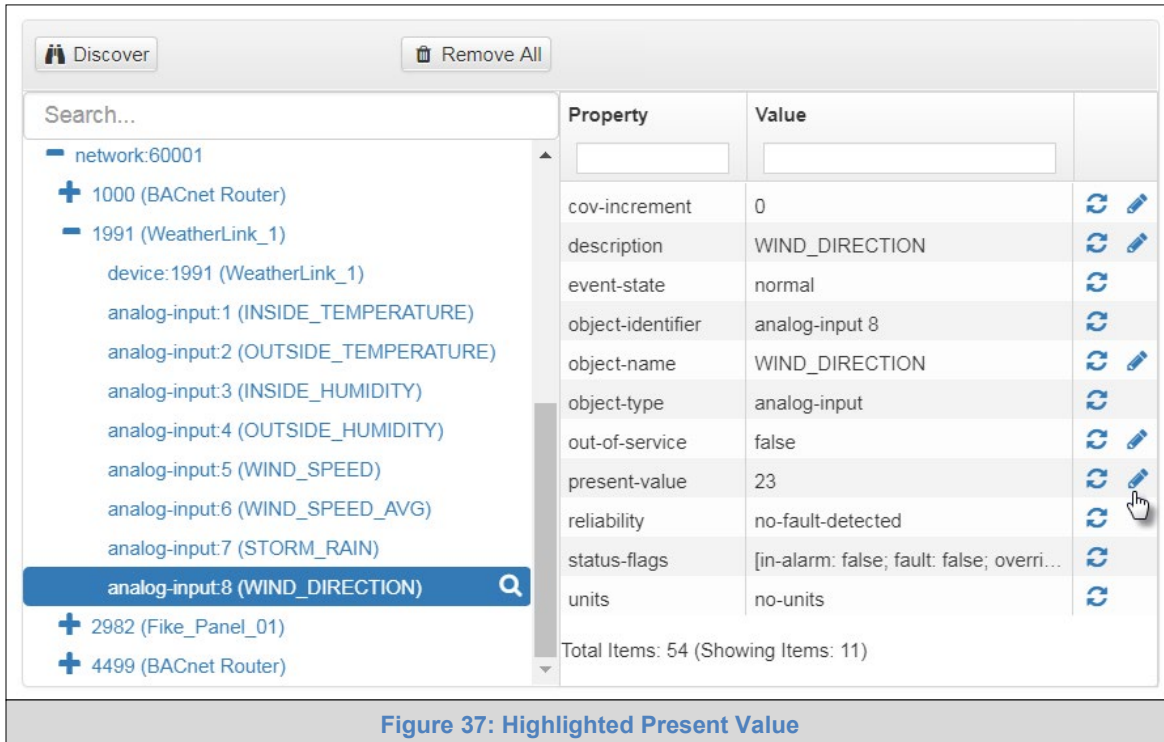

Figure 37: Highlighted Present Value

- Then click the Write button ( ) on the right of the property to bring up the Write Property window.

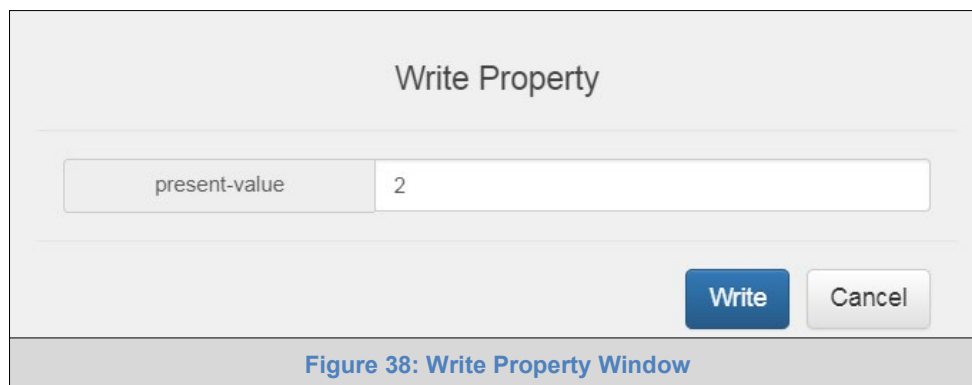

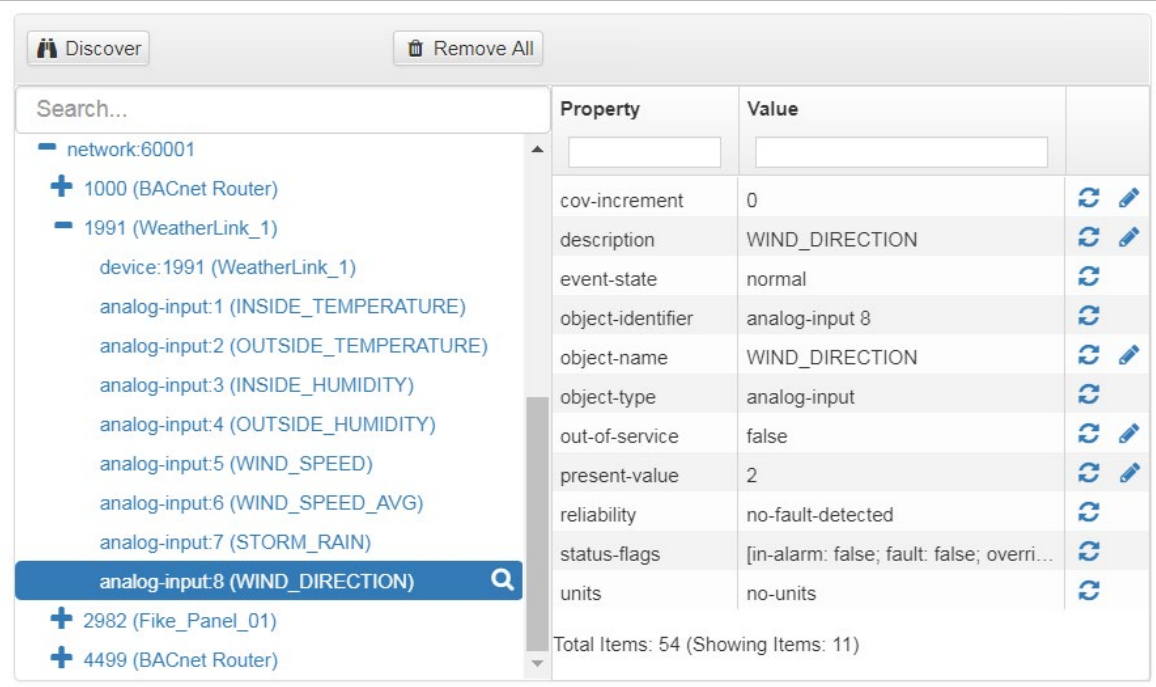

Figure 38: Write Property Window

- Enter the appropriate change and click the Write button.

The window will close. When the BACnet Explorer page appears, the present value will be changed as specified.

The screenshot shows the BACnet Explorer interface. On the left, a tree view lists network objects under 'network:60001'. The object 'analog-input:8 (WIND\_DIRECTION)' is selected. On the right, a table displays the properties of this object. The 'present-value' property is highlighted, showing a value of 2. Other properties include 'cov-increment' (0), 'description' (WIND\_DIRECTION), 'event-state' (normal), 'object-identifier' (analog-input 8), 'object-name' (WIND\_DIRECTION), 'object-type' (analog-input), 'out-of-service' (false), 'reliability' (no-fault-detected), 'status-flags' ([in-alarm: false; fault: false; overri...), and 'units' (no-units). The bottom status bar indicates 'Total Items: 54 (Showing Items: 11)'.

Property	Value	
cov-increment	0	
description	WIND_DIRECTION	
event-state	normal	
object-identifier	analog-input 8	
object-name	WIND_DIRECTION	
object-type	analog-input	
out-of-service	false	
present-value	2	
reliability	no-fault-detected	
status-flags	[in-alarm: false; fault: false; overri...	
units	no-units	

Total Items: 54 (Showing Items: 11)

**Figure 39: Updated Present Value**

## Appendix A. Troubleshooting

### Appendix A.1. Lost or Incorrect IP Address

- Ensure that FieldServer Toolbox is loaded onto the local PC. Otherwise, download the FieldServer-Toolbox.zip via the Sierra Monitor website's [Software Downloads](#).
- Extract the executable file and complete the installation.

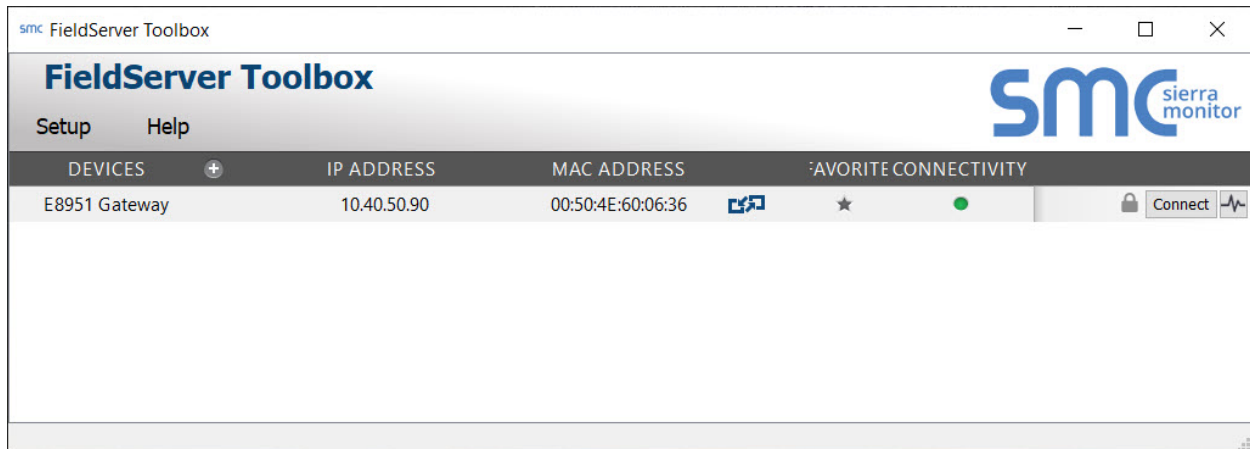

Figure 40: Ethernet Port Location

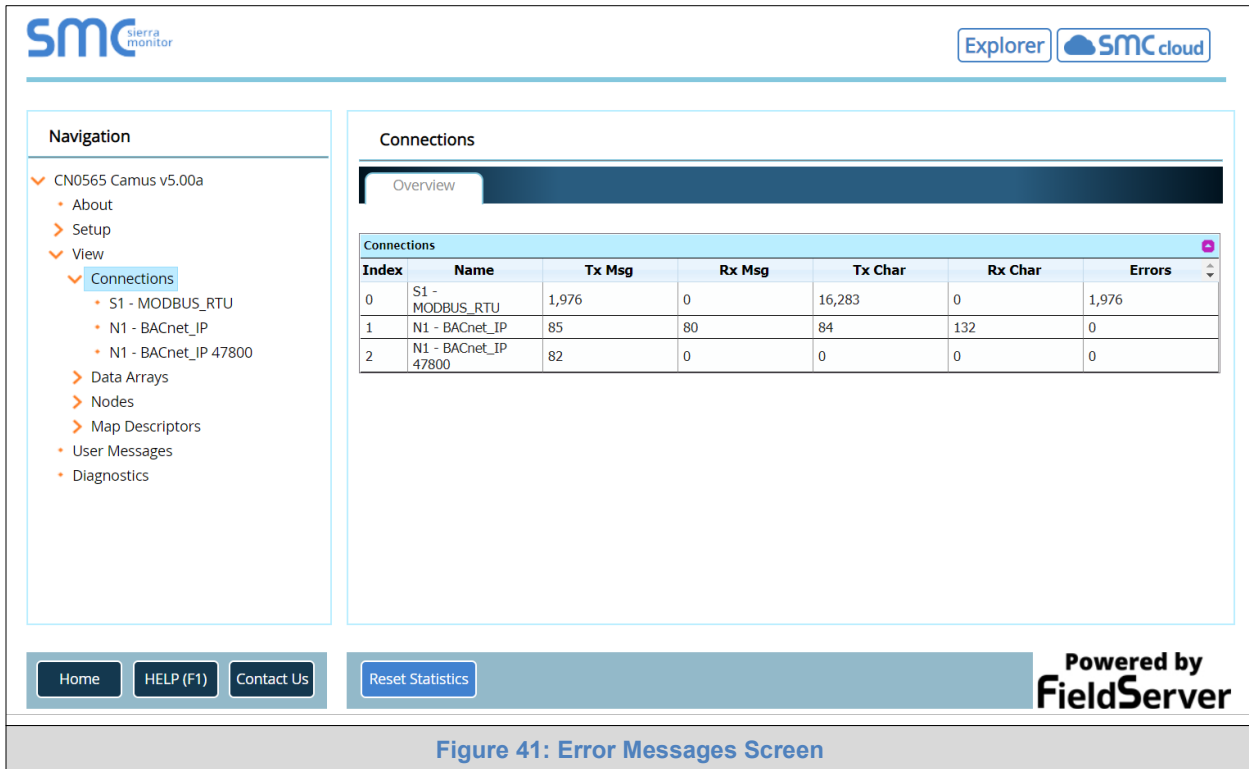

- Connect a standard Cat-5 Ethernet cable between the user's PC and ProtoNode.
- Double click on the FS Toolbox Utility and click Discover Now on the splash page.
- Check for the IP Address of the desired gateway.

- If correcting the IP Address of the gateway: click the settings icon  on the same row as the gateway, then click Network Settings, change the IP Address and click Update IP Settings to save.

## Appendix A.2. Viewing Diagnostic Information

- Type the IP Address of the ProtoNode into the web browser or use the FieldServer Toolbox to connect to the ProtoNode.
- Click on Diagnostics and Debugging Button, then click on view, and then on connections.
- If there are any errors showing on the Connection page, refer to [Appendix A.3](#) for the relevant wiring and settings.

The screenshot displays the SMC web interface for viewing diagnostic information. The left sidebar shows a navigation menu with the following items:

- ✓ CN0565 Camus v5.00a
  - About
  - Setup
  - View
    - ✓ **Connections**
      - S1 - MODBUS\_RTU
      - N1 - BACnet\_IP
      - N1 - BACnet\_IP 47800
    - Data Arrays
    - Nodes
    - Map Descriptors
    - User Messages
    - Diagnostics

The main content area is titled "Connections" and includes an "Overview" tab. Below the tab is a table showing the status of various connections:

Index	Name	Tx Msg	Rx Msg	Tx Char	Rx Char	Errors
0	S1 - MODBUS_RTU	1,976	0	16,283	0	1,976
1	N1 - BACnet_IP	85	80	84	132	0
2	N1 - BACnet_IP 47800	82	0	0	0	0

At the bottom of the interface, there are buttons for "Home", "HELP (F1)", "Contact Us", and "Reset Statistics". The bottom right corner features the "Powered by FieldServer" logo.

Figure 41: Error Messages Screen

### Appendix A.3. Check Wiring and Settings

- No COMS on Modbus RTU side. If the Tx/Rx LEDs are not flashing rapidly then there is a COM issue. To fix this, check the following:
  - Visual observations of LEDs on the ProtoNode ([Appendix A.4](#))
  - Check baud rate, parity, data bits, stop bits
  - Check device address
  - Verify wiring
  - Verify the Modbus device(s) were listed in the Web Configurator ([Section 5.3](#))
- Field COM problems:
  - If Ethernet protocols are used, observe Ethernet LEDs on the ProtoNode ([Appendix A.4](#))
  - Check dipswitch settings (using correct baud rate and device instance)
  - Verify IP Address setting
  - Verify wiring

**NOTE:** If the problem persists, a Diagnostic Capture needs to be taken and sent to support. ([Appendix A.5](#))

## Appendix A.4. LED Diagnostics for Communications Between ProtoNode and Devices

See the diagram below for ProtoNode FPC-N34 and FPC-N35 LED Locations.

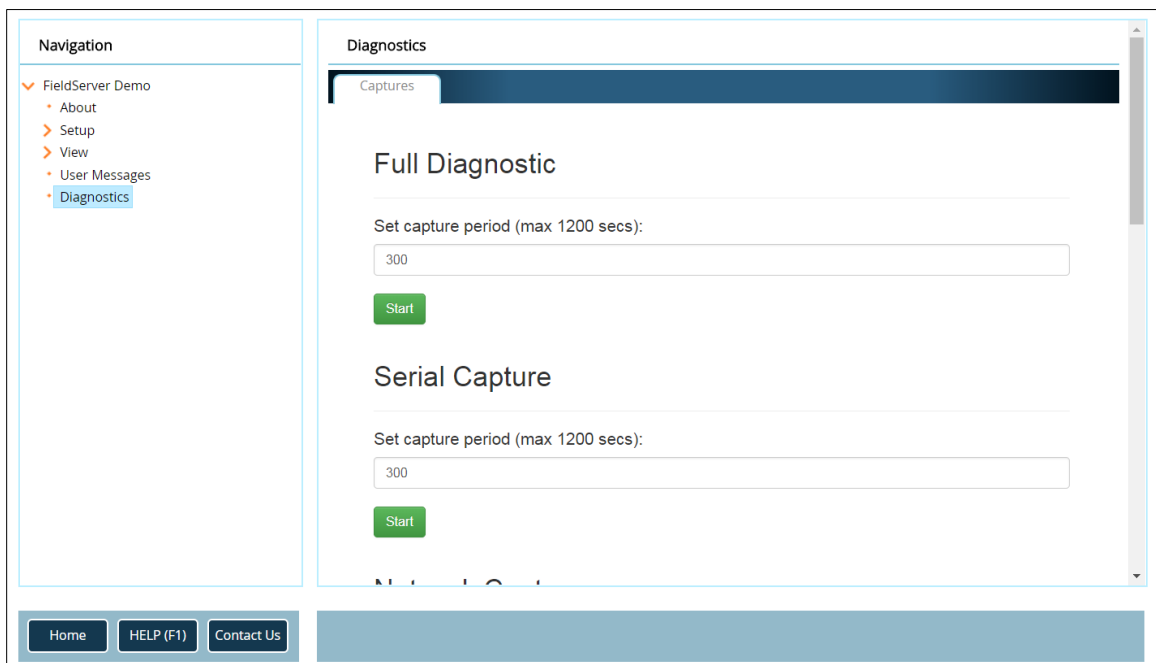

## Appendix A.5. Take a FieldServer Diagnostic Capture

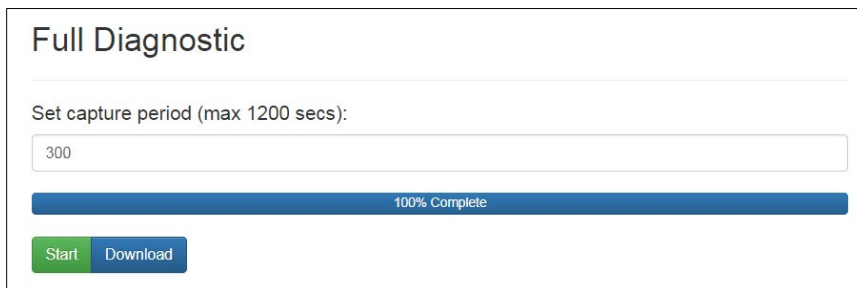

**When there is a problem on-site that cannot easily be resolved, perform a Diagnostic Capture before contacting support. Once the Diagnostic Capture is complete, email it to technical support. The Diagnostic Capture will accelerate diagnosis of the problem.**

If the FieldServer bios is updated/released on November 2017 or later then the Diagnostic Capture is performed via the gateway's on-board system.

- Access the FieldServer Diagnostics page via one of the following methods:
  - Open the FieldServer FS-GUI page and click on Diagnostics in the Navigation panel
  - Open the FieldServer Toolbox software and click the diagnose icon  of the desired device

- Go to Full Diagnostic and select the capture period.
- Click the Start button under the Full Diagnostic heading to start the capture.
  - When the capture period is finished, a Download button will appear next to the Start button

- Click Download for the capture to be downloaded to the local PC.

- Send the diagnostic zip file to technical support.

**NOTE: Diagnostic captures of BACnet MS/TP communication are output in a “.PCAP” file extension which is compatible with Wireshark.**

#### Appendix A.5.1. Taking a Capture with Older Firmware

If the FieldServer firmware is from before November 2017, the Diagnostic Capture can be done by downloading the FieldServer Toolbox software but network connections (such as Ethernet and Wi-Fi) cannot be captured (if a network diagnostic is needed take a Wire Shark capture).

**Once the Diagnostic Capture is complete, email it to technical support. The Diagnostic Capture will accelerate diagnosis of the problem.**

- Ensure that FieldServer Toolbox is loaded onto the local PC. Otherwise, download the FieldServer-Toolbox.zip via the Sierra Monitor website's [Software Downloads](#).
- Extract the executable file and complete the installation.

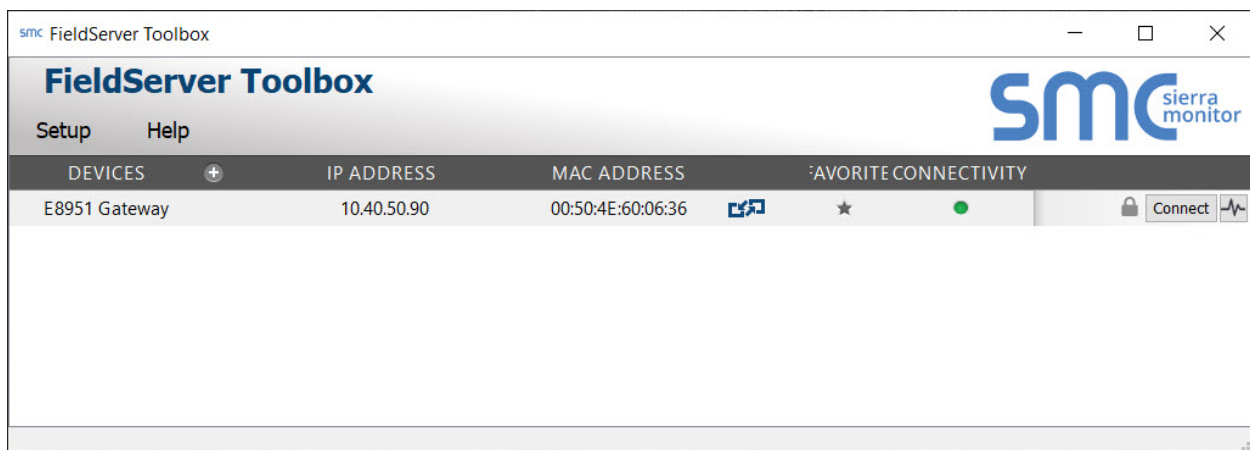

Figure 43: Ethernet Port Location

- Connect a standard Cat-5 Ethernet cable between the PC and ProtoNode.
- Double click on the FS Toolbox Utility.
- **Step 1: Take a Log**
  - Click on the diagnose icon  for the desired device

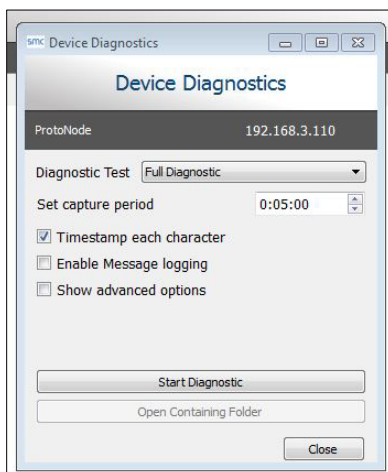

- Select "Full Diagnostic" from the drop down menu

**NOTE:** If desired, the default capture period can be changed.

- Click on the Start Diagnostic button

- Wait for the capture period to finish and the Diagnostic Test Complete window will appear
- **Step 2: Send Log**
  - Once the diagnostic test is complete, a .zip file is saved on the PC

- Choose "Open" to launch explorer and have it point directly at the correct folder
- Send the Diagnostic zip file to technical support

 Diagnostic_2014-07-17_20-15.zip	2014/07/17 20:16	zip Archive	676 KB
---	------------------	-------------	--------

## Appendix B. Additional Information

### Appendix B.1. Update Firmware

To load a new version of the firmware, follow these instructions:

1. Extract and save the new file onto the local PC.
2. Open a web browser and type the IP Address of the FieldServer in the address bar.
  - Default IP Address is 192.168.1.24
  - Use the FS Toolbox utility if the IP Address is unknown ([Appendix A.1](#))
3. Click on the “Diagnostics & Debugging” button.
4. In the Navigation Tree on the left hand side, do the following:
  - a. Click on “Setup”
  - b. Click on “File Transfer”
  - c. Click on the “General” tab
5. In the General tab, click on “Choose Files” and select the web.img file extracted in step 1.
6. Click on the orange “Submit” button.
7. When the download is complete, click on the “System Restart” button.

### Appendix B.2. BACnet: Setting Network\_Number for More Than One ProtoNode on the Subnet

For both BACnet MS/TP and BACnet/IP, if more than one ProtoNode is connected to the same subnet, they must be assigned unique Network\_Number values.

On the main Web Configuration screen, update the BACnet Network Number field and click submit. The default value is 50001.

network_nr	<b>BACnet Network Number</b> This sets the BACnet network number of the Gateway. <i>(1 - 65535)</i>	<input type="text" value="50001"/>	<input type="button" value="Submit"/>
------------	---	------------------------------------	---------------------------------------

**Figure 44: Web Configurator – Network Number Field**

## Appendix B.3. Securing ProtoNode with Passwords

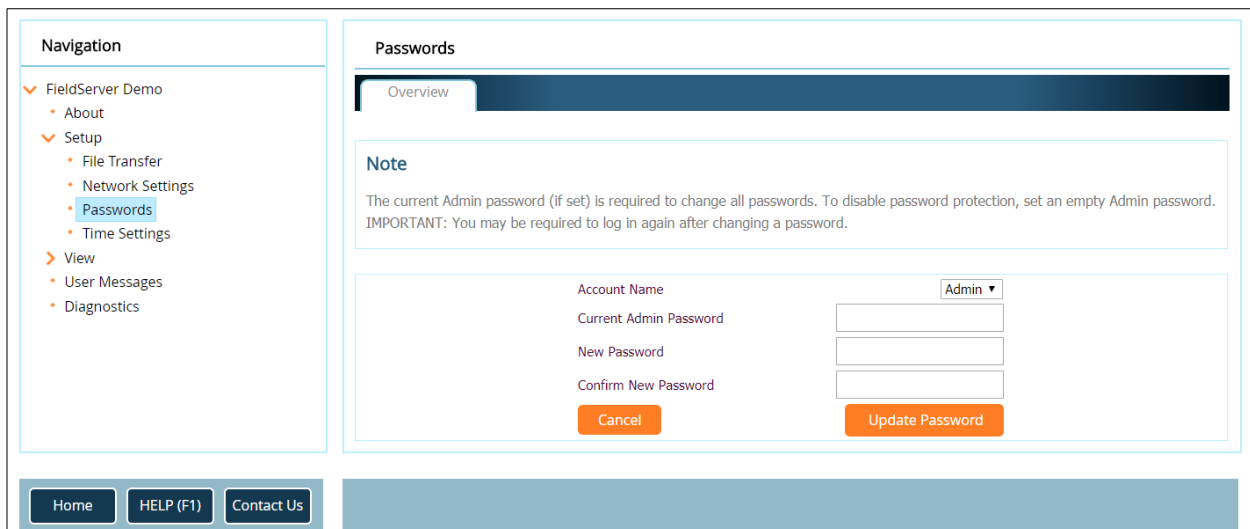

Access to the ProtoNode can be restricted by enabling a password on the FS-GUI Passwords page – click Setup and then Passwords in the navigation panel. There are 2 access levels defined by 2 account names: Admin and User.

- The Admin account has unrestricted access to the ProtoNode.
- The User account can view any ProtoNode information but cannot make any changes or restart the ProtoNode.

The password needs to be a minimum of eight characters and **is case sensitive**.

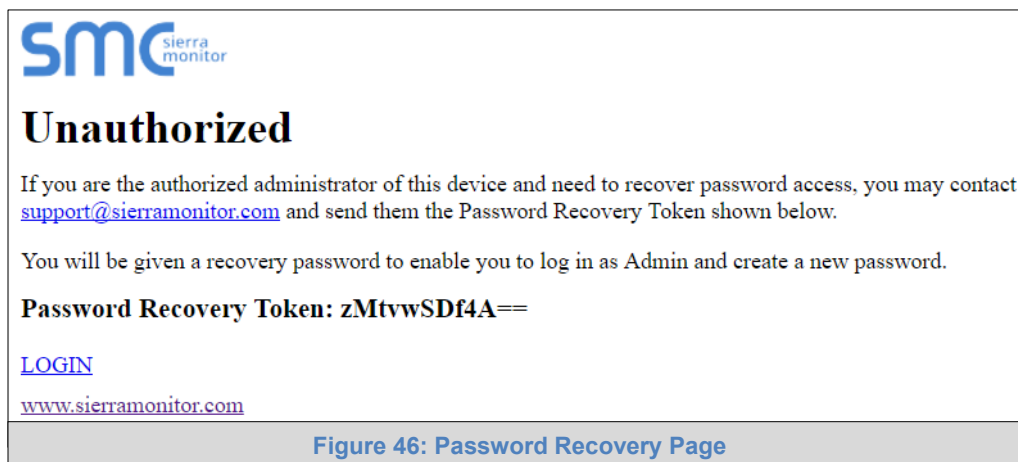

If the password is lost, click cancel on the password authentication popup window, and email the password recovery token to technical support to receive a temporary password from the support team. Access the ProtoNode to set a new password.

**NOTE: If a gateway in the field is updated to a secure gateway, the password will change to “admin”. This change will still occur if the gateway was already setup with a unique password that was loaded in the factory and printed on the label.**

The screenshot shows the FS-GUI Passwords page. On the left is a navigation panel with options: FieldServer Demo, About, Setup (selected), File Transfer, Network Settings, Passwords (highlighted), Time Settings, View, User Messages, and Diagnostics. The main content area is titled 'Passwords' and has an 'Overview' tab. A note states: 'The current Admin password (if set) is required to change all passwords. To disable password protection, set an empty Admin password. IMPORTANT: You may be required to log in again after changing a password.' Below the note are input fields for 'Account Name' (set to 'Admin'), 'Current Admin Password', 'New Password', and 'Confirm New Password'. There are 'Cancel' and 'Update Password' buttons at the bottom. At the very bottom of the page are links for 'Home', 'HELP (F1)', and 'Contact Us'.

Figure 45: FS-GUI Passwords Page

The screenshot shows the Password Recovery page. It features the Sierra Monitor logo at the top. The heading is 'Unauthorized'. The text reads: 'If you are the authorized administrator of this device and need to recover password access, you may contact [support@sierramonitor.com](mailto:support@sierramonitor.com) and send them the Password Recovery Token shown below. You will be given a recovery password to enable you to log in as Admin and create a new password.' The 'Password Recovery Token' is displayed as 'zMtwvSDf4A=='. Below the token are links for 'LOGIN' and 'www.sierramonitor.com'.

Figure 46: Password Recovery Page

## Appendix B.4. Internet Browser Software Support

The following web browsers are supported:

- Chrome Rev. 57 and higher
- Firefox Rev. 35 and higher
- Microsoft Edge Rev. 41 and higher
- Safari Rev. 3 and higher

**NOTE: Internet Explorer is no longer supported as recommended by Microsoft.**

**NOTE: Computer and network firewalls must be opened for Port 80 to allow FieldServer GUI to function.**

## Appendix C. Vendor Information – Camus

**NOTE: All Modbus TCP/IP registers are the same as the Modbus RTU registers for the serial device. The Modbus TCP/IP node address of the device is also the same as the Modbus RTU node address.**

## Appendix C.1. Sola Modbus RTU Mappings to BACnet, Metasys N2, Modbus TCP/IP &amp; LonWorks

Point Name	R/W	Modbus Address (hex)	Modbus Register (dec)	BACnet Object Type	BACnet Object ID / N2 Point Address	N2 Data Type	Lon Name	Lon SNVT	Note
Demand source	R	0006	0006	AI	2	AI	nvoXDemandSource	SNVT_count_f	0 = Unknown 1 = No source demand 2 = CH 3 = DHW 4 = Lead Lag slave 5 = Lead lag master 6 = CH frost protection 7 = DHW frost protection 8 = No demand due to burner switch turned off 9 = DHW storage 10 = Reserved 11 = Warm weather shutdown

DHW Setpoint	R/W	01C5	0453	AV	55	AO	nvi/nvoXDHWSWP	SNVT_temp_p	40 – 200°F <sup>1</sup>
Lead Lag Master Enable	R/w	0221	0545	AV	64	AO	nvoXLdLgMstrEnbl	SNVT_count_f	0 = Not a Lead/Lag master 1 = Lead/Lag master
Lead Lag setpoint	R/W	0222	0546	AV	65	AO	nvi/nvoXLdLgSetpoint	SNVT_temp_p	40 – 200°F <sup>1</sup>
Burner cycle count	R	0080-0081	0128-0129	AV	89	AO	N/A	N/A	0-999,999
Burner run time	R	0082-0083	0130-0131	AV	90	AO	N/A	N/A	0-999,999 hours
CH pump cycle count	R	0084-0085	0132-0133	AV	91	AO	nvi/nvoXCHPmpCycCnt	SNVT_count_f	0-999,999
Lead Boiler Address	R	0321	0801	AI	97	AI	nvoXLdBlrAddr	SNVT_count_f	Modbus address of the first boiler that will be or was added to service Lead Lag demand (slave must be available for firing)
Lead Lag Operation Switch	R/W	022B	0555	BV	104	DO	nvi/nvoXLdLgOpSwitch	SNVT_switch	To enable/disable the Lead Lag boiler plant
Active System Setpoint	R	001D	0029	AI	108	AI	nvoXActSysSP	SNVT_count_p	40 – 200°F <sup>1</sup>
Modulation Output	R	00C0	0192	AI	105	AI	nvoXModOutput	SNVT_count_f	0 = Fan PWM 1 = 0-10Vdc 2 = 4-20mA
Max Firing Rate	R	00C1	0193	AI	106	AI	nvoXMaxFirRate	SNVT_count_f	(% <sup>2</sup> or RPM <sup>3</sup> )
Min Firing Rate	R	00C3	0195	AI	107	AI	nvoXMinFirRate	SNVT_count_f	(% <sup>2</sup> or RPM <sup>3</sup> )

<sup>1</sup> All temperature registers are expressed in °C regardless of what temperature units are set to on the boiler, ex. 32.0°C = 320. A temperature that is NOT applicable has a value of 0x8FFF.

<sup>2</sup> All percentage values are given in 0.1% granularity, ie. 0-1000 is the range from 0.0 – 100.0%

<sup>3</sup> Most significant bit in value determines which units type the parameter has: 0 = RPM, 1 = %. If modulation output parameter doesn't match with the setting of this bit, then the parameter setting is invalid

<sup>4</sup> For binary fraction % format commanded rate is a binary fraction between .00000000 (0% = no heat at all) and .11111111 (99.98% = maximum fire). For a 0.5% step format commanded rate is a value between 0 (minimum fire) and 200 (maximum fire) that is a multiple of 0.5% (200 x 0.5% = 100%)

<sup>5</sup> Commanded rate in least significant byte of this register can be expressed in two formats: binary fraction % or multiple of 0.35% steps. Bit 8 of this register indicates which format the commanded rate is expressed in; when bit 8 is set, the commanded rate is in binary fraction % format when bit 8 is cleared, the commanded rate is in 0.5% steps.

## Appendix C.2. DynaFLO Modbus RTU Mappings to BACnet, Metasys N2, Modbus TCP/IP &amp; LonWorks

Point Name	R/W	Modbus Address (hex)	Modbus Register (dec)	BACnet Object Type	BACnet Object ID / N2 Point Address	N2 Data Type	Lon Name	Lon SNVT	Note

## Appendix D. Lockout & Alert Codes (Sola)

### Appendix D.1. Lockout Codes (Sola)

Code	Description	Note
0	None	No lockout/hold
1	Unconfigured safety data	Lockout
2	Waiting for safety data verification	Lockout
3	Internal fault: Hardware fault	Hold
4	Internal fault: Safety relay feedback error	Hold
5	Internal fault: Unstable power (DCDC) output	Hold
6	Internal fault: Invalid processor clock	Hold
7	Internal fault: Safety relay drive error	Hold
8	Internal fault: Zero crossing not detected	Hold
9	Internal fault: Flame bias out of range	Hold
10	Internal fault: Invalid burner control state	Lockout
11	Internal fault: Invalid burner control state flag	Lockout
12	Internal fault: Safety relay drive cap short	Hold
13	Internal fault: PII shorted to ILK	Hold/Lockout
14	Internal fault: HFS shorted to LCI	Hold/Lockout
15	Internal fault: Safety relay test failed due to feedback ON	Lockout
16	Internal fault: Safety relay test failed due to safety relay OFF	Lockout
17	Internal fault: Safety relay test failed due to safety relay not OFF	Lockout
18	Internal fault: Safety relay test failed due to feedback not ON	Lockout
19	Internal fault: Safety RAM write	Lockout
20	Internal fault: Flame ripple and overflow	Hold
21	Internal fault: Flame number of sample mismatch	Hold
22	Internal fault: Flame bias out of range	Hold
23	Internal fault: Bias changed since heating cycle starts	Hold
24	Internal fault: Spark voltage stuck low or high	Hold
25	Internal fault: Spark voltage changed too much during flame sensing time	Hold
26	Internal fault: Static flame ripple	Hold
27	Internal fault: Flame rod shorted to ground detected	Hold
28	Internal fault: A/D linearity test failed	Hold
29	Internal fault: Flame bias cannot be set in range	Hold
30	Internal fault: Flame bias shorted to adjacent pin	Hold
31	Internal fault: SLO electronics unknown error	Hold
32	Internal fault: Safety key 0	Lockout
33	Internal fault: Safety key 1	Lockout
34	Internal fault: Safety key 2	Lockout
35	Internal fault: Safety key 3	Lockout
36	Internal fault: Safety key 4	Lockout
37	Internal fault: Safety key 5	Lockout
38	Internal fault: Safety key 6	Lockout
39	Internal fault: Safety key 7	Lockout
40	Internal fault: Safety key 8	Lockout

41	Internal fault: Safety key 9	Lockout
42	Internal fault: Safety key 10	Lockout
43	Internal fault: Safety key 11	Lockout
44	Internal fault: Safety key 12	Lockout
45	Internal fault: Safety key 13	Lockout
46	Internal fault: Safety key 14	Lockout
47	Flame rod to ground leakage	Hold
48	Static flame (not flickering)	Hold
49	24Vac voltage low/high	Hold
50	Modulation fault	Hold
51	Pump fault	Hold
52	Motor tachometer fault	Hold
53	AC inputs phase reversed	Lockout
54	Safety GVT model ID doesn't match application's model ID	Lockout
55	Application configuration data block CRC errors	Lockout
56-57	RESERVED	
58	Internal fault: HFS shorted to IAS	Lockout
59	Internal fault: Mux pin shorted	Lockout
60	Internal fault: HFS shorted to LFS	Lockout
61	Anti-short cycle	Hold
62	Fan speed not proved	Hold
63	LCI off	Hold
67	ILK off	Hold
68	ILK on	Hold
69	Pilot test hold	Hold
70	Wait for leakage test completion	Hold
71-77	RESERVED	
78	Demand lost in run	Hold
79	Outlet high limit	Hold
81	Delta T inlet/outlet limit	Hold
82	Stack limit	Lockout
91	Inlet sensor fault	Hold
92	Outlet sensor fault	Hold
93	DHW sensor fault	Hold
94	S2 (J8-6) sensor fault	Hold
95	Stack sensor fault	Hold
96	S5 (J8-11) sensor fault	Hold
97	Internal fault: A2D mismatch	Lockout
98	Internal fault: Exceeded VSNSR voltage tolerance	Lockout
99	Internal fault: Exceeded 28V voltage tolerance	Lockout
101-104	RESERVED	
105	Flame detected out of sequence	Lockout
106	Flame lost in MFEP	Lockout
107	Flame lost early in run	Lockout
108	Flame lost in run	Lockout
109	Ignition failed	Lockout
110	Ignition failure occurred	Hold
111	Flame current lower than WEAK threshold	Hold

112	Pilot test flame timeout	Lockout
113	Flame circuit timeout	Lockout
114-121	RESERVED	
122	Lightoff rate proving failed	Lockout
123	Purge rate proving failed	Lockout
124	High fire switch OFF	Hold
125	High fire switch stuck ON	Hold
126	Low fire switch OFF	Hold
127	Low fire switch stuck ON	Hold
128	Fan speed failed during prepurge	Hold
129	Fan speed failed during preignition	Hold
130	Fan speed failed during ignition	Hold
131	Fan movement detected during standby	Hold
132	Fan speed failed during run	Hold
133-135	RESERVED	
136	Interrupted Airflow Switch failed to close	Hold
137	ILK failed to close	Hold
138-142	RESERVED	
143	Internal fault: Flame bias out of range 1	Lockout
144	Internal fault: Flame bias out of range 2	Lockout
145	Internal fault: Flame bias out of range 3	Lockout
146	Internal fault: Flame bias out of range 4	Lockout
147	Internal fault: Flame bias out of range 5	Lockout
148	Internal fault: Flame bias out of range 6	Lockout
149	Flame detected	Lockout
150	Flame not detected	Hold
151	High fire switch ON	Hold
158	Main valve ON	Lockout
159	Main valve OFF	Lockout
160	Ignition ON	Lockout
161	Ignition OFF	Lockout
162	Pilot valve ON	Lockout
163	Pilot valve OFF	Lockout
166-171	RESERVED	
172	Main relay feedback incorrect	Lockout
173	Pilot relay feedback incorrect	Lockout
174	Safety relay feedback incorrect	Lockout
175	Safety relay open	Lockout
176	Main relay ON and safe start check	Lockout
177	Pilot relay ON at safe start check	Lockout
178	Safety relay ON at safe start check	Lockout
179-183	RESERVED	
184	Invalid Blower/HIS output setting	Lockout
185	Invalid Delta T limit enable setting	Lockout
186	Invalid Delta T limit response setting	Lockout
187	Invalid DHW high limit enable setting	Lockout
188	Invalid DHW high limit response setting	Lockout
189	Invalid Flame sensor type setting	Lockout

192	Invalid igniter on during setting	Lockout
193	Invalid ignite failure delay setting	Lockout
194	Invalid ignite failure response setting	Lockout
195	Invalid ignite failure retries setting	Lockout
196	Invalid ignition source setting	Lockout
197	Invalid interlock open response setting	Lockout
198	Invalid Interlock start check setting	Lockout
199	Invalid LCI enable setting	Lockout
200	Invalid lightoff rate setting	Lockout
201	Invalid lightoff rate proving setting	Lockout
202	Invalid Main Flame Establishing Period setting	Lockout
203	Invalid MFEP flame failure response setting	Lockout
204	Invalid NTC sensor type setting	Lockout
205	Invalid Outlet high limit response setting	Lockout
206	Invalid Pilot Flame Establishing Period setting	Lockout
207	Invalid PII enable setting	Lockout
208	Invalid pilot test hold setting	Lockout
209	Invalid pilot type setting	Lockout
210	Invalid postpurge time setting	Lockout
211	Invalid power up with lockout setting	Lockout
212	Invalid preignition time setting	Lockout
213	Invalid prepurge rate setting	Lockout
214	Invalid prepurge time setting	Lockout
215	Invalid purge rate proving setting	Lockout
216	Invalid run flame failure response setting	Lockout
217	Invalid run stabilization time setting	Lockout
218	Invalid stack limit enable setting	Lockout
219	Invalid stack limit enable setting	Lockout
224	Invalid DHW demand source setting	Lockout
225	Invalid flame threshold setting	Lockout
226	Invalid outlet high limit setpoint setting	Lockout
228	Invalid Stack limit setpoint setting	Lockout
229	Invalid modulation output setting	Lockout
230	Invalid CH demand source setting	Lockout
231	Invalid Delta T limit delay setting	Lockout
234	Invalid outlet high limit enable setting	Lockout
235	Invalid outlet connector type setting	Lockout
236	Invalid inlet connector type setting	Lockout
237	Invalid DHW connector type setting	Lockout
238	Invalid Stack connector type setting	Lockout
239	Invalid S2 (J8-6) connector type setting	Lockout
240	Invalid S5 (J8-11) connector type setting	Lockout
244	Internal fault: Safety relay test invalid state	Lockout
246	4-20mA cannot be used for both modulation and setpoint control	Lockout
250	Invalid fan speed error message	Lockout
252-255	RESERVED	

## Appendix D.2. Alert Codes (Sola)

Code	Description
0	None (No alert)
1	Alert PCB was restored from factory defaults
2	Safety configuration parameters were restored from factory defaults
3	Configuration parameters were restored from factory defaults
4	Invalid Factory Invisibility PCB was detected
5	Invalid Factory Range PCB was detected
6	Invalid range PCB record has been dropped
7	EEPROM lockout history was initialized
8	Switched application annunciation data blocks
9	Switched application configuration data blocks
10	Configuration was restored from factory defaults
11	Backup configuration settings was restored from active configuration
12	Annunciation configuration was restored from factory defaults
13	Annunciation configuration was restored from backup
14	Safety group verification table was restored from factory defaults
15	Safety group verification table was updated
16	Invalid Parameter PCB was detected
17	Invalid Range PCB was detected
18	Alarm silence time exceeded maximum
19	Invalid safety group verification table was detected
20	Backdoor password could not be determined
21	Invalid safety group verification table was not accepted
22	CRC errors were found in application configuration data blocks
23	Backup Alert PCB was restored from active one
24	RESERVED
25	Lead Lag operation switch was turned OFF
26	Lead Lag operation switch was turned ON
27	Safety processor was reset
28	Application processor was reset
29	Burner switch was turned OFF
30	Burner switch was turned ON
31	Program Module (PM) was inserted into socket
32	Program Module (PM) was removed from socket
33	Alert PCB was configured
34	Parameter PCB was configured
35	Range PCB was configured
36	Program Module (PM) incompatible with product was inserted into socket
37	Program Module application parameter revision differs from application processor
38	Program Module safety parameter revision differs from safety processor
39	PCB incompatible with product contained in Program Module
40	Parameter PCB in Program Module is too large for product
41	Range PCB in Program Module was too large for product
42	Alert PCB in Program Module was too large for product
43	IAS start check was forced on due to IAS enabled
44	Low voltage was detected in safety processor
45	High line frequency occurred
46	Low line frequency occurred
47	Invalid subsystem reset request occurred
48	Write large enumerated Modbus register value was not allowed
49	Maximum cycle count was reached
50	Maximum hours count was reached

51	Illegal Modbus write was attempted
52	Modbus write attempt was rejected (NOT ALLOWED)
53	Illegal Modbus read was attempted
54	Safety processor brown-out reset occurred
55	Application processor watchdog reset occurred
56	Application processor brown-out reset occurred
57	Safety processor watchdog reset occurred
58	Alarm was reset by the user at the control
59	Burner control firing rate was > absolute max rate
60	Burner control firing rate was < absolute min rate
61	Burner control firing rate was invalid, % vs. RPM
62	Burner control was firing with no fan request
63	Burner control rate (nonfiring) was > absolute max rate
64	Burner control rate (nonfiring) was < absolute min rate
65	Burner control rate (nonfiring) was absent
66	Burner control rate (nonfiring) was invalid, % vs. RPM
67	Fan off cycle rate was invalid, % vs. RPM
68	Setpoint was overridden due to sensor fault
69	Modulation was overridden due to sensor fault
70	No demand source was set due to demand priority conflicts
71	CH 4-20mA signal was invalid
72-	RESERVED
74	Periodic Forced Recycle
75	Absolute max fan speed was out of range
76	Absolute min fan speed was out of range
77	Fan gain down was invalid
78	Fan gain up was invalid
79	Fan minimum duty cycle was invalid
80	Fan pulses per revolution was invalid
81	Fan PWM frequency was invalid
82-	RESERVED
84	Lead Lag CH 4-20mA water temperature setting was invalid
85	No Lead Lag add stage error threshold was configured
86	No Lead Lag add stage detection time was configured
87	No Lead Lag drop stage error threshold was configured
88	No Lead Lag drop stage detection time was configured
89	Lead Lag all boiler off threshold was invalid
90	Modulation output type was invalid
91	Firing rate control parameter was invalid
92	Forced rate was out of range vs. min/max modulation
93	Forced rate was invalid, % vs. RPM
94	Slow start ramp value was invalid
95	Slow start degrees value was invalid
96	Slow start was ended due to outlet sensor fault
97	Slow start was end due to reference setpoint fault
98	CH max modulation rate was invalid, % vs. RPM
99	CH max modulation rate was > absolute max rate
100	CH modulation range (max minus min) was too small (< 4% or 40 RPM)
101	DHW max modulation rate was invalid, % vs. RPM
102	DHW max modulation rate was > absolute max rate
103	DHW modulation range (max minus min) was too small (< 4% or 40 RPM)
104	Min modulation rate was < absolute min rate
105	Min modulation rate was invalid, % vs. RPM
106	Manual rate was invalid, % vs. RPM

107	Slow start enabled, but forced rate was invalid
108	Analog output hysteresis was invalid
109	Analog modulation output type was invalid
110	IAS open rate differential was invalid
111	IAS open step rate was invalid
112	Mix max modulation rate was invalid, % vs. RPM
113	Mix max modulation rate was > absolute max or < absolute min rates
114	Mix modulation range (max minus min) was too small (< 4% or 40 RPM)
115	Fan was limited to its minimum duty cycle
116	Manual rate was > CH max modulation rate
117	Manual rate was > DHW max modulation rate
118	Manual rate was < min modulation rate
119	Manual rate in Standby was > absolute max rate
120	Modulation commanded rate was > CH max modulation rate
121	Modulation commanded rate was > DHW max modulation rate
122	Modulation commanded rate was < min modulation rate
123	Modulation rate was limited due to Outlet limit
124	Modulation rate was limited due to Delta-T limit
125	Modulation rate was limited due to Stack limit
126	Modulation rate was limited due to anticondensation
127	Fan speed out of range in RUN
128	Modulation rate was limited due to IAS was open
129	Slow start ramp setting of zero will result in no modulation rate change
130	No forced rate was configured for slow start ramp
131	CH demand source was invalid
132	CH P-gain was invalid
133	CH I-gain was invalid
134	CH D-gain was invalid
135	CH OFF hysteresis was invalid
136	CH ON hysteresis was invalid
137	CH sensor type was invalid
138	CH hysteresis step time was invalid
139	CH remote control parameter was invalid
140	CH ODR not allowed with remote control
141	Steam P-gain was invalid
142	Steam I-gain was invalid
143	Steam D-gain was invalid
144	Steam OFF hysteresis was invalid
145	Steam ON hysteresis was invalid
146	CH control was suspended due to fault
147	CH header temperature was invalid
148	CH Outlet temperature was invalid
149	CH steam pressure was invalid
150	Steam setpoint source parameter was invalid
151	Minimum water temperature parameter was greater than setpoint
152	Minimum water temperature parameter was greater than time of day setpoint
153	Minimum pressure parameter was greater than setpoint
154	Minimum pressure parameter was greater than time of day setpoint
155	CH modulation rate source parameter was invalid
156	Steam modulation rate source parameter was invalid
157	DHW demand source was invalid
158	DHW P-gain was invalid
159	DHW I-gain was invalid
160	DHW D-gain was invalid

161	DHW OFF hysteresis was invalid
162	DHW ON hysteresis was invalid
163	DHW hysteresis step time was invalid
164	DHW sensor type was invalid
165	Inlet sensor type was invalid for DHW
166	Outlet sensor type was invalid for DHW
167	DHW storage OFF hysteresis was invalid
168	DHW storage ON hysteresis was invalid
169	DHW modulation sensor type was invalid
170	DHW modulation sensor was not compatible for Auto mode
171	DHW control was suspended due to fault
172	DHW temperature was invalid
173	DHW inlet temperature was invalid
174	DHW outlet temperature was invalid
175	DHW high limit must be disabled for Auto mode
176	DHW sensor type was not compatible for Auto mode
177	DHW priority source setting was invalid
178	DHW priority method setting was invalid
179	CH S5 (J8-11) sensor was invalid
180	CH Inlet temperature was invalid
181	CH S10 (J10-7) sensor was invalid
182	Lead Lag CH setpoint source was invalid
183	Lead Lag P-gain was invalid
184	Lead Lag I-gain was invalid
185	Lead Lag D-gain was invalid
186	Lead Lag OFF hysteresis was invalid
187	Lead Lag ON hysteresis was invalid
188	Lead Lag slave enable was invalid
189	Lead Lag hysteresis step time was invalid
190	No Lead Lag Modbus port was assigned
191	Lead Lag base load common setting was invalid
192	Lead Lag DHW demand switch setting was invalid
193	Lead Lag Mix demand switch setting was invalid
194	Lead Lag modulation sensor setting was invalid
195	Lead Lag backup modulation sensor setting was invalid
196	Lead Lag slave mode setting was invalid
197	Lead Lag rate allocation setting was invalid
198	Lead selection setting was invalid
199	Lag selection setting was invalid
200	Lead Lag slave return setting was invalid
201	Lead Lag add stage method setting was invalid
202	STAT may not be a Lead Lag CH demand source when Remote Stat is enabled
203	Lead Lag base load rate setting was invalid
204	Lead Lag master was suspended due to fault
205	Lead Lag slave was suspended due to fault
206	Lead Lag header temperature was invalid
207	Lead Lag was suspended due to no enabled Program Module installed
208	Lead Lag slave session has timed out
209	Too many Lead Lag slaves were detected
210	Lead Lag slave was discovered
211	Incompatible Lead Lag slave was discovered
212	No base load rate was set for Lead Lag slave
213	Lead Lag slave unable to fire before demand to fire delay expired
214	Adding Lead Lag slave aborted due to add requirement change
215	No Lead Lag slaves available to service demand

216	No Lead Lag active service was set due to demand priority conflicts
217	No Lead Lag add stage method was specified
218	No Lead Lag drop stage method was specified
219	Using backup Lead Lag header sensor due to sensor failure
220	Lead Lag frost protection rate was invalid
221	Lead Lag drop stage method setting was invalid
222	CH frost protection temperature was invalid
223	CH frost protection inlet temperature was invalid
224	DHW frost protection temperature was invalid
225-226	RESERVED
227	DHW priority override time was not derated due to invalid outdoor temperature
228	Warm weather shutdown was not checked due to invalid outdoor temperature
229	Lead Lag slave communication timeout
230	RESERVED
231	Lead Lag CH setpoint was invalid
232	Lead Lag CH time of day setpoint was invalid
233	Lead Lag outdoor temperature was invalid
234	Lead Lag ODR time of day setpoint was invalid
235	Lead Lag ODR time of day setpoint exceeded normal setpoint
236	Lead Lag ODR max outdoor temperature was invalid
237	Lead Lag ODR min outdoor temperature was invalid
238	Lead Lag ODR low water temperature was invalid
239	Lead Lag ODR outdoor temperature range was too small (minimum 12 C / 22
240	Lead Lag ODR water temperature range was too small (minimum 12 C / 22 F)
241	Lead Lag DHW setpoint was invalid
242	Lead Lag Mix setpoint was invalid
243	Lead Lag CH demand switch was invalid
244	Lead Lag ODR min water temperature was invalid
245	RESERVED
246	CH setpoint was invalid
247	CH time of day setpoint was invalid
248	CH outdoor temperature was invalid
249	CH ODR time of day setpoint was invalid
250	CH ODR time of day setpoint exceeds normal setpoint
251	CH max outdoor setpoint was invalid
252	CH min outdoor setpoint was invalid
253	CH ODR low water temperature was invalid
254	CH ODR outdoor temperature range was too small
255	CH ODR water temperature range was too small
256	Steam setpoint was invalid
257	Steam time of day setpoint was invalid
258	Steam minimum pressure was invalid
259	CH ODR min water temperature was invalid
260	RESERVED
261	DHW setpoint was invalid
262	DHW time of day setpoint was invalid
263	DHW storage setpoint was invalid
264	STAT may not be a DHW demand source when Remote Stat is enabled
265-266	RESERVED
267	STAT may not be a CH demand source when Remote Stat is enabled
268	CH 4mA water temperature setting was invalid
269	CH 20mA water temperature setting was invalid
270	Steam 4mA water temperature setting was invalid
271	Steam 20mA water temperature setting was invalid
272	Abnormal Recycle: Pressure sensor fault

273	Abnormal Recycle: Safety relay drive test failed
274	Abnormal Recycle: Demand off during Pilot Flame Establishing Period
275	Abnormal Recycle: LCI off during Drive to Purge Rate
276	Abnormal Recycle: LCI off during Measured Purge Time
277	Abnormal Recycle: LCI off during Drive to Lightoff Rate
278	Abnormal Recycle: LCI off during Pre-Ignition test
279	Abnormal Recycle: LCI off during Pre-Ignition time
280	Abnormal Recycle: LCI off during Main Flame Establishing Period
281	Abnormal Recycle: LCI off during Ignition period
282	Abnormal Recycle: Demand off during Drive to Purge Rate
283	Abnormal Recycle: Demand off during Measured Purge Time
284	Abnormal Recycle: Demand off during Drive to Lightoff Rate
285	Abnormal Recycle: Demand off during Pre-Ignition test
286	Abnormal Recycle: Demand off during Pre-Ignition time
287	Abnormal Recycle: Flame was on during Safe Start check
288	Abnormal Recycle: Flame was on during Drive to Purge Rate
289	Abnormal Recycle: Flame was on during Measured Purge Time
290	Abnormal Recycle: Flame was on during Drive to Lightoff Rate
291	Abnormal Recycle: Flame was not on at end of Ignition period
292	Abnormal Recycle: Flame was lost during Main Flame Establishing Period
293	Abnormal Recycle: Flame was lost early in Run
294	Abnormal Recycle: Flame was lost during Run
295	Abnormal Recycle: Leakage test failed
296	Abnormal Recycle: Interrupted air flow switch was off during Drive to Purge
297	Abnormal Recycle: Interrupted air flow switch was off during Measured Purge
298	Abnormal Recycle: Interrupted air flow switch was off during Drive to Lightoff
299	Abnormal Recycle: Interrupted air flow switch was off during Pre-Ignition test
300	Abnormal Recycle: Interrupted air flow switch was off during Pre-Ignition time
301	Abnormal Recycle: Interrupted air flow switch was off during Main Flame
302	Abnormal Recycle: Ignition failed due to interrupted air flow switch was off
303	Abnormal Recycle: ILK off during Drive to Purge Rate
304	Abnormal Recycle: ILK off during Measured Purge Time
305	Abnormal Recycle: ILK off during Drive to Lightoff Rate
306	Abnormal Recycle: ILK off during Pre-Ignition test
307	Abnormal Recycle: ILK off during Pre-Ignition time
308	Abnormal Recycle: ILK off during Main Flame Establishing Period
309	Abnormal Recycle: ILK off during Ignition period
310	Run was terminated due to ILK was off
311	Run was terminated due to interrupted air flow switch was off
312	Stuck reset switch
313	Run was terminated due to fan failure
314	Abnormal Recycle: Fan failed during Drive to Purge Rate
315	Abnormal Recycle: Fan failed during Measured Purge Time
316	Abnormal Recycle: Fan failed during Drive to Lightoff Rate
317	Abnormal Recycle: Fan failed during Pre-Ignition test
318	Abnormal Recycle: Fan failed during Pre-Ignition time
319	Abnormal Recycle: Fan failed during Ignition period
320	Abnormal Recycle: Fan failed during Main Flame Establishing Period
321	Abnormal Recycle: Main Valve off after 10 seconds of RUN
322	Abnormal Recycle: Pilot Valve off after 10 seconds of RUN
323	Abnormal Recycle: Safety Relay off after 10 seconds of RUN
324	Abnormal Recycle: Hardware flame bias
325	Abnormal Recycle: Hardware static flame
326	Abnormal Recycle: Hardware flame current invalid

327	Abnormal Recycle: Hardware flame rod short
328	Abnormal Recycle: Hardware invalid power
329	Abnormal Recycle: Hardware invalid AC line
330	Abnormal Recycle: Hardware SLO flame ripple
331	Abnormal Recycle: Hardware SLO flame sample
332	Abnormal Recycle: Hardware SLO flame bias range
333	Abnormal Recycle: Hardware SLO flame bias heat
334	Abnormal Recycle: Hardware SLO spark stuck
335	Abnormal Recycle: Hardware SLO spark changed
336	Abnormal Recycle: Hardware SLO static flame
337	Abnormal Recycle: Hardware SLO rod shorted
338	Abnormal Recycle: Hardware SLO AD linearity
339	Abnormal Recycle: Hardware SLO bias not set
340	Abnormal Recycle: Hardware SLO bias shorted
341	Abnormal Recycle: Hardware SLO electronics
342	Abnormal Recycle: Hardware processor clock
343	Abnormal Recycle: Hardware AC phase
344	Abnormal Recycle: Hardware A2D mismatch
345	Abnormal Recycle: Hardware VSNSR A2D
346	Abnormal Recycle: Hardware 28V A2D
347	Abnormal Recycle: Hardware HFS IAS shorted
348	Abnormal Recycle: Hardware PII INTLK shorted
349	Abnormal Recycle: Hardware HFS LCI shorted
350	Abnormal Recycle: Hardware HFS LFS shorted
351	Abnormal Recycle: Invalid zero crossing
352	Abnormal Recycle: fault stack sensor
353	Abnormal Recycle: stack limit
354	Abnormal Recycle: delta T limit
355	Abnormal Recycle: fault outlet sensor
356	Abnormal Recycle: outlet high limit
357	Abnormal Recycle: fault DHW sensor
358	Abnormal Recycle: DHW high limit
359	Abnormal Recycle: fault inlet sensor
360	Abnormal Recycle: Check Parameters Failed
361	Internal error: No factory parameters were detected in control
362	Internal error: PID iteration frequency was invalid
363	Internal error: Demand-Rate interval time was invalid
364	Internal error: Factory calibration parameter for modulation was invalid
365	Internal error: CH PID P-scaler was invalid
366	Internal error: CH PID I-scaler was invalid
367	Internal error: CH PID D-scaler was invalid
368	Internal error: DHW PID P-scaler was invalid
369	Internal error: DHW PID I-scaler was invalid
370	Internal error: DHW PID D-scaler was invalid
371	Internal error: Lead Lag master PID P-scaler was invalid
372	Internal error: Lead Lag master PID I-scaler was invalid
373	Internal error: Lead Lag master PID D-scaler was invalid
374	Abnormal Recycle: Hardware flame bias high
375	Abnormal Recycle: Hardware flame bias low
376	Abnormal Recycle: Hardware flame bias delta high
377	Abnormal Recycle: Hardware flame bias delta low
378	Abnormal Recycle: Hardware flame bias dynamic high
379	Abnormal Recycle: Hardware flame bias dynamic low
380	Abnormal Recycle: Fan Speed Not Proven
381	Abnormal Recycle: Fan Speed Range Low

382	Abnormal Recycle: Fan Speed Range High
383-450	RESERVED
451	Circulator control was invalid
452	Circulator P-gain was invalid
453	Circulator I-gain was invalid
454	Circulator temperature was invalid
455	Circulator outlet temperature was invalid
456	Circulator inlet temperature was invalid
457	Circulator outdoor temperature was invalid
458	Circulator sensor choice was invalid
459	Circulator PID setpoint was invalid
460	LCI lost in run
461	Abnormal Recycle: Demand lost in run from application
462	Abnormal Recycle: Demand lost in run due to high limit
463	Abnormal Recycle: Demand lost in run due to no flame
464	LCI lost in Combustion Pressure Establishing Period
465	LCI lost in Combustion Pressure Stabilization Period
466	RESERVED
467	Internal error: EEPROM write was attempted before EEPROM was initialized
468	Internal error: EEPROM cycle count address was invalid
469	Internal error: EEPROM days count address was invalid
470	Internal error: EEPROM hours count address was invalid
471	Internal error: Lockout record EEPROM index was invalid
472	Internal error: Request to write PM status was invalid
473	Internal error: PM parameter address was invalid
474	Internal error: PM safety parameter address was invalid
475	Internal error: Invalid record in lockout history was removed
476	Internal error: EEPROM write buffer was full
477	Internal error: Data too large was not written to EEPROM
478	Internal error: Safety key bit 0 was incorrect
479	Internal error: Safety key bit 1 was incorrect
480	Internal error: Safety key bit 2 was incorrect
481	Internal error: Safety key bit 3 was incorrect
482	Internal error: Safety key bit 4 was incorrect
483	Internal error: Safety key bit 5 was incorrect
484	Internal error: Safety key bit 6 was incorrect
485	Internal error: Safety key bit 7 was incorrect
486	Internal error: Safety key bit 8 was incorrect
487	Internal error: Safety key bit 9 was incorrect
488	Internal error: Safety key bit 10 was incorrect
489	Internal error: Safety key bit 11 was incorrect
490	Internal error: Safety key bit 12 was incorrect
491	Internal error: Safety key bit 13 was incorrect
492	Internal error: Safety key bit 14 was incorrect
493	Internal error: Safety key bit 15 was incorrect
494	Internal error: Safety relay timeout
495	Internal error: Safety relay commanded off
496	Internal error: Unknown safety error occurred
497	Internal error: Safety timer was corrupt
498	Internal error: Safety timer was expired
499	Internal error: Safety timings
500	Internal error: Safety shutdown
501	RESERVED

600	Delta T inlet temperature was invalid
601	Delta T outlet temperature was invalid
602	Delta T exchanger temperature was invalid
603	Parameter PCB was switched to backup
604	Range PCB was switched to backup
605	Lead Lag ODR boost max offpoint temperature was invalid
606	Lead Lag ODR boost max offpoint temperature was too low
607	Mix ODR boost max offpoint temperature was invalid
608	Mix ODR boost max offpoint temperature was too low
609	Time to rotate lead boiler to next firing slave
610	Time to rotate lead boiler to next available slave
611	Time to rotate lead boiler to first firing slave in order
612	Time to rotate lead boiler to lowest running slave
613	Lead boiler was rotated based on new firing sequence order
614	Lead boiler was rotated based on measured run time
615	Parameter PCB was switched to backup
616	Range PCB was switched to backup
617	Lead Lag steam pressure was invalid
618	Lead Lag steam setpoint was invalid
619	Lead Lag steam OFF hysteresis was invalid
620	Lead Lag steam ON hysteresis was invalid
621	Lead Lag steam minimum pressure was invalid
622	Lead Lag modulation sensor was not valid with setpoint source

## Appendix D.3. Pump Status Codes (Sola)

Status	Description Note
92	Forced On from manual pump control
93	Forced On due to Outlet high limit is active
94	Forced On from burner demand
95	Forced On due to Lead Lag slave has demand
96	Forced Off from local DHW priority service
97	Forced Off from Lead Lag DHW priority service
98	Forced Off from Central Heat anti-condensation
99	Forced Off from DHW anti-condensation
100	Forced Off due to DHW high limit is active
101	Forced Off from EnviraCOM DHW priority service
102	On due to local CH frost protection is active
103	On due to Lead Lag CH frost protection is active
104	On due to local DHW frost protection is active
105	On due to Lead Lag DHW frost protection is active
106	On from local Central Heat demand
107	On from Lead Lag Central Heat demand
108	On from local DHW demand
109	On from Lead Lag DHW demand
110	On from local Mix demand
111	On from Lead Lag Mix demand
112	On from local Central Heat service
113	On from Lead Lag Central Heat service
114	On from local DHW service
115	On from Lead Lag DHW service
116	On from local Mix service
117	On from Lead Lag Mix service
118	On from Lead Lag auxiliary pump X
119	On from Lead Lag auxiliary pump Y
120	On from Lead Lag auxiliary pump Z
121	On, but inhibited by pump start delay
122	On from pump override
123	Off, not needed
124	On from burner demand
125	On from exercise
126	On from local Lead Lag service
127	On from local Lead Lag pump demand

#### Appendix F.1.1. Compliance with UL Regulations

For UL compliance, the following instructions must be met when operating ProtoNode.

- The units shall be powered by listed LPS or Class 2 power supply suited to the expected operating temperature range.
- The interconnecting power connector and power cable shall:
  - Comply with local electrical code
  - Be suited to the expected operating temperature range
  - Meet the current and voltage rating for ProtoNode
- Furthermore, the interconnecting power cable shall:
  - Be of length not exceeding 3.05m (118.3")
  - Be constructed of materials rated VW-1, FT-1 or better
- If the unit is to be installed in an operating environment with a temperature above 65 °C, it should be installed in a Restricted Access Area requiring a key or a special tool to gain access.
- This device must not be connected to a LAN segment with outdoor wiring.

## Appendix G. Limited 2 Year Warranty

MSA Safety warrants its products to be free from defects in workmanship or material under normal use and service for two years after date of shipment. MSA Safety will repair or replace any equipment found to be defective during the warranty period. Final determination of the nature and responsibility for defective or damaged equipment will be made by MSA Safety personnel.

All warranties hereunder are contingent upon proper use in the application for which the product was intended and do not cover products which have been modified or repaired without MSA Safety's approval or which have been subjected to accident, improper maintenance, installation or application, or on which original identification marks have been removed or altered. This Limited Warranty also will not apply to interconnecting cables or wires, consumables or to any damage resulting from battery leakage.

In all cases MSA Safety's responsibility and liability under this warranty shall be limited to the cost of the equipment. The purchaser must obtain shipping instructions for the prepaid return of any item under this warranty provision and compliance with such instruction shall be a condition of this warranty.

Except for the express warranty stated above, MSA Safety disclaims all warranties with regard to the products sold hereunder including all implied warranties of merchantability and fitness and the express warranties stated herein are in lieu of all obligations or liabilities on the part of MSA Safety for damages including, but not limited to, consequential damages arising out of or in connection with the use or performance of the product.
